

LOS Sales — GRO Micro Sales (GMSS) Knowledge Base

(RAG-Ready Version)

Note on this version: This document carries the same information as the original knowledge base, but every table and every flowchart/diagram has been rewritten into plain-language prose paragraphs. No tables or flowchart/ASCII-art elements remain — everything is expressed in full sentences so a RAG retrieval/embedding pipeline can index and retrieve it directly as text.

Stage 1 — Create / Search Application

Purpose

The Create / Search Application stage is the entry point of the GRO Micro Sales (GMSS) loan journey. It identifies the applicant using the applicant's Phone Number and PAN and checks whether an existing application is available to continue.

Inputs

PAN-Based Applicant Classification The 4th character of the PAN determines the applicant category relevant to the application: This table shows how the 4th character of the applicant's PAN number determines their applicant category. If the 4th character is "P", the applicant category is Proprietor/Individual, meaning an individual or proprietorship business applicant. If the 4th character is "C", the applicant category is Company, meaning a company or corporate entity. If the 4th character is "F", the applicant category is Firm, meaning a firm or business entity. If the 4th character is "T", the applicant category is Trust, meaning a trust entity. This 4th letter classification is called pancard Constitution. The applicant category is important because the type of information required in subsequent application stages can depend on the applicant/entity structure. The exact downstream field changes should be defined from the relevant subsequent-stage screens.

The 4th character of a Permanent Account Number (PAN) specifically dictates the legal entity type or "status" of the PAN holder. Understanding this character instantly reveals the legal classification of the taxpayer without needing to run a background check on the Income Tax portal.

Here is the detailed breakdown of the entity codes **P**, **C**, **F**, and **T**, followed by two additional common entity types (**H** and **A**).

1. 'P' – Person (Individual)

- **Target Entity:** Individual human beings.
- **Scope:** This is by far the most common PAN type. It applies to salaried individuals, regular citizens, professionals, and foreign citizens paying taxes in India. Notably, **sole proprietorships** do not get a separate business PAN; the business taxes are filed under the proprietor's personal 'P' PAN.

5th Character Rule: For 'P' category PANs, the 5th character will always be the first letter of the individual's **surname** (last name).

2. 'C' – Company

- **Target Entity:** Registered Corporate Entities.

- **Scope:** This applies to all corporate bodies registered under the Companies Act. It includes Private Limited Companies (Pvt Ltd), Public Limited Companies (Ltd), One Person Companies (OPC), Section 8 companies (NGOs registered as companies), and foreign companies generating taxable income in India.
- **5th Character Rule:** The 5th character represents the first letter of the registered company's name.

3. 'F' – Firm (Partnership)

- **Target Entity:** Partnership Firms.

Scope: This category covers traditional Partnership Firms governed by the Indian Partnership Act of 1932, as well as Limited Liability Partnerships (LLPs) registered under the LLP Act of 2008. Unlike a sole proprietorship, the tax department treats a partnership or LLP as a distinct legal entity separate from its individual partners.

- **5th Character Rule:** The 5th character represents the first letter of the Firm or LLP's registered name.

4. 'T' – Trust

- **Target Entity:** Trusts.
- **Scope:** Applies to entities legally structured as trusts under the Indian Trusts Act, 1882. This includes charitable trusts, private family trusts, religious trusts, and educational trusts holding property or generating income for a specific beneficiary or cause.
- **5th Character Rule:** The 5th character represents the first letter of the Trust's name.

Two Additional Entity Codes

5. 'H' – Hindu Undivided Family (HUF)

- **Target Entity:** Hindu Undivided Family.
- **Scope:** Under Indian tax law, an HUF is recognized as a separate and distinct tax entity from its individual members. It comprises all persons lineally descended from a common ancestor. An HUF gets its own PAN, files its own tax returns, and can claim independent tax deductions distinct from the *Karta* (the head of the family). If an individual applies for an HUF PAN, the 4th character will be 'H', not 'P'.
- **5th Character Rule:** The 5th character is the first letter of the HUF's name (which is typically the Karta's name followed by "HUF").

6. 'A' – Association of Persons (AOP)

- **Target Entity:** Association of Persons.
- **Scope:** An AOP is formed when two or more persons (which can be individuals, companies, or firms) voluntarily join together for a common purpose or enterprise to earn income, but do not legally incorporate as a company or register as a partnership firm.
- **5th Character Rule:** The 5th character represents the first letter of the Association's name.

Note on Remaining Codes: The other entity codes are **B** (Body of Individuals), **G** (Government Agency), **L** (Local Authority), and **J** (Artificial Juridical Person). For all of these non-individual entities, the 5th character is always the first letter of the entity's registered name.

Existing Application Search After Phone Number and PAN are provided, the system checks whether an application already exists for the applicant.

If an existing application is found, SkaleUp displays:

- Application ID
- Applicant Name
- Application Status
- Required Loan Amount
- Created Date
- Product
- Sourcing Business Name (SBN)
- Requested Tenure
- BDM
- Current Owner
- Application Stage
- Application SubStage

This table lists the two mandatory input fields required to search for or create an application. Phone Number is mandatory and must be the applicant's mobile number, which must begin with the digit 6, 7, 8, or 9. PAN Card is mandatory and represents the applicant's or entity's PAN number; the 4th character of this PAN identifies the

applicant category (Individual, Company, Firm, or Trust, as described above). The Business Development Executive (BDE) is provided with a Resume Application option to continue the existing application rather than creating a duplicate.

Example:

- Application Status: PRE-LOGIN
- Application Stage: File Login
- Application SubStage: Pending documents for login

If no existing application is found, the process proceeds with creation of a new application.

Decision Flow

This flowchart describes the Create/Search Application decision process. The BDE first enters the applicant's Phone Number and PAN. The system validates these inputs, then identifies the applicant category from the PAN's 4th character. The system then searches for an existing application using these details. If an existing application is found, the system displays the application details to the BDE, who can then choose to resume that existing application. If no existing application is found, the system creates a new application and proceeds to the Loan Details stage.

Key Context

Create / Search Application is responsible for applicant identification and determining whether the BDE should resume an existing application or start a new application. PAN classification provides the applicant/entity type that may affect subsequent data requirements.

Stage 2 — Loan Details

Purpose

The Loan Details stage captures the application's sourcing information, applicant type, loan product/sub-product, requested loan amount, loan purpose, transaction type, and referral status. All fields marked * are mandatory. Information entered here determines key conditions for subsequent stages.

1. Source Type

Type: Dropdown | Mandatory: Yes Options and meaning:

- BOE — Application sourced through the BOE channel.
- Direct — Application sourced directly without a DSA or referral partner.
- DSA — Application sourced through a Direct Selling Agent (DSA)/intermediary.
- Referral Partner — Application originated through a referral partner. The selected value

identifies how the application originated.

2. Source User

Type: Dropdown | Mandatory: Yes | Current: BOE name along with ID The Source User identifies the BOE/user associated with sourcing the application. The available users are determined by the selected Sourcing Branch.

This diagram shows a dependency chain: selecting the Sourcing Branch determines which BOEs (Business Officers/Executives) belong to that branch, and the list of BOEs in that branch in turn determines the options available in the Source User dropdown.

3. Sourcing Branch

Type: Dropdown | Mandatory: Yes | Current: Branch's Name Options: Delhi Prime, Hubli Prime, Noida Micro, Varanasi, Lucknow, Surat Prime, Tirunelveli Micro, Hoskote Micro, Nadiad Micro, Chennai Prime. The selected branch identifies the sourcing location/context and determines which BOEs are available under Source User.

4. Sourcing Business Name (SBN)

Type: Dropdown | Mandatory: Yes Identifies the business/sourcing channel associated with the application. For this workflow: Sourcing Business Name (SBN) example: Gro Micro Sales (GMSS). In this context, Sourcing Business Name (SBN), SBN Micro, GRO Micro Sales (GMSS), and Sales Banking Name are treated as equivalent terminology.

5. Product Requirement

Type: Dropdown | Mandatory: Yes Options:

- Secured Loan — loan backed by applicable security/collateral.
- Unsecured Loan — loan without the same collateral-backed structure. The selected Product

Requirement determines whether the loan is backed by collateral. In a Secured Loan, the borrower pledges an asset (such as property, machinery, or other acceptable collateral) as security. In an Unsecured Loan, no collateral is pledged, and eligibility is determined based on the applicant's creditworthiness, income, and business profile.

6. Sub Product Requirement

Type: Dropdown | Mandatory: Yes The available secured-loan sub-products depend on applicant type, which is determined from the PAN category.

- LAP (Loan Against Property) — secured loan where eligible property is used as security.
- HL / Affordable Home Loan (HL) — home-loan product intended for the affordable housing

segment.

Confirmed Product Logic This diagram states the product-eligibility rule linking applicant type to available sub-products. If the applicant type is Individual, the available sub-products are either LAP (Loan Against Property) or Affordable Home Loan/HL. If the applicant type is Entity, the only available sub-product is LAP; Affordable Home Loan/HL is not available to Entity applicants.

7. Application Type

Type: Radio Button | Mandatory: Yes Options:

- Non-Salaried — applicant has a non-salaried income profile.
- Salaried — applicant has a salaried employment income profile. Non-Salaried implies the applicant is entity and entity cannot be salaried. While, salaried implies the applicant is individual or proprietor.

8. Loan Amount (Rs.)

Type: Numeric/Text Input | Mandatory: Yes | Placeholder: Enter Loan Amount The permitted amount depends on whether the applicant is an Individual or Entity. This table gives the permitted loan amount range by applicant type. For an Individual applicant, the permitted loan amount range is ■2 lakh to ■5 crore (i.e., ■2,00,000 to ■5,00,00,000). For an Entity applicant, the permitted loan amount range is ■1 lakh to ■20 lakh (i.e., ■1,00,000 to ■20,00,000). Individual → ■2,00,000 to ■5,00,00,000 Entity → ■1,00,000 to ■20,00,000 The chatbot must determine applicant type first before answering loan-limit questions.

9. End Use of Loan

Type: Dropdown | Mandatory: Yes | Placeholder: Select End Use of Loan The field records why the applicant requires the loan.

- Acquisition of Plant & Machinery — acquisition of plant/machinery for business.
- Balance Transfer — transfer/refinancing of an existing loan.
- Business Extension — expansion/extension of an existing business.
- Debt Consolidation of Existing Loans — consolidation of existing loan obligations.
- For Professional Use — financing for professional use/activity.
- Home/Shop Renovation and Improvement — renovation, repair or improvement of home/shop.
- Installation of Solar Panel — financing solar-panel installation.
- Purchase of Assets — financing purchase of assets.
- Purchase of New Machinery — financing purchase of new machinery.
- Working Capital – Business — financing ongoing business working-capital requirements.

10. Transaction Type

Type: Dropdown | Mandatory: Yes | Placeholder: Select Transaction Type The field identifies the nature of the loan transaction.

- Balance Transfer — transfer/refinance of an existing loan.
- BT + Topup — balance transfer plus additional funding.
- Fresh — new loan requirement, not a transfer/top-up.
- Internal Balance Transfer — balance transfer involving an existing internal loan relationship.
- Purchase Case — purchase-related financing transaction.
- Takeover — existing borrowing being taken over.
- Top-up — additional borrowing over an existing loan/credit relationship.

Key distinction This summarizes the key distinctions between transaction types. "Fresh" means the transaction is a brand-new loan. "Balance Transfer" means the transaction transfers an existing borrowing from another lender. "BT + Topup" means the transaction both transfers an existing borrowing and adds additional funding on top. "Top-up" means the transaction adds additional funding over an existing borrowing, without a transfer. The exact UGRO-specific rules distinguishing Balance Transfer, Internal Balance Transfer, Takeover, and Purchase Case are provided based on their policies and procedures.

11. Is Referral Case?

Type: Radio Button | Mandatory: Yes | Current: No Options:

- Yes — application is classified as a referral case.
- No — application is not classified as a referral case. Any additional fields/workflow triggered

by Yes means a referral case usually means the lead/customer was introduced by a third party rather than sourced directly. Potential referrers could be:

- Existing customer
- Channel partner / Direct Selling Agent (DSA)
- Connector
- Employee referral

- Business associate
- Builder / dealer
- External agent

12. Proceed

After all mandatory fields are completed, the Business Development Executive (BDE) selects Proceed. This flowchart describes the final step of the Loan Details stage: after the BDE completes all mandatory fields, the system validates the inputs, and once validation passes, the BDE selects Proceed, which moves the application to the next stage.

13. Critical Stage Dependencies

PAN Category → Applicant Type The applicant type is established from the 4th character of the PAN:

- P → Proprietor / Individual
- C → Company / Entity
- F → Firm / Entity
- T → Trust / Entity

This diagram shows the derivation chain for applicant type: starting from the PAN number, the system looks at its 4th character, which maps to an Applicant Category (Proprietor, Company, Firm, or Trust), which is then classified as either Individual or Entity — with Proprietor being Individual, and Company, Firm, and Trust all being Entity.

Applicant Type → Sub Product This diagram repeats the sub-product eligibility rule: for an Individual applicant choosing a Secured or Unsecured Loan, the available sub-products are Loan Against Property (LAP) or Affordable Home Loan (HL). For an Entity applicant choosing a Secured or Unsecured Loan, only LAP is available.

Applicant Type → Loan Amount This restates the loan amount limits: Individual applicants can request between ■2 lakh and ■5 crore; Entity applicants can request between ■1 lakh and ■20 lakh.

Sourcing Branch → Source User This diagram shows that selecting a Sourcing Branch determines which BOEs are associated with that branch, and those BOEs become the available options in the Source User dropdown.

Application Type → Subsequent Data Salaried and Non-Salaried represent different income profiles. Downstream changes are applied based on applicant type, that is, whether the applicant is an individual or entity.

Referral Case → Subsequent Data Yes/No determines referral classification.

RAG Retrieval Rule

For any Loan Details question, interpret the answer within GRO Micro Sales (GMSS) → Stage 2 → Loan Details. When a question concerns loan amount or available sub-products, first determine the applicant type from the PAN category, then apply the corresponding rule. Do not infer undocumented UGRO-specific mappings or conditions.

Stage 3.1 — Quick Data Entry (QDE): Input Fields

The Quick Data Entry screen differs based on the Applicant Type.

- Entity Flow → captures business, registration, authorized-signatory and business-address information.
- Individual / Home Loan (HL) Applicant Flow → captures personal, residence, employment, education and current-address information. * = Mandatory field.

3.2 Main Applicant — Entity

1. Applicant Information

This table lists the Applicant Information fields for an Entity applicant. Applicant Type is a selection field identifying the applicant as an Entity. Authorized Signatory Mobile Number is a mandatory mobile-number field for the person authorized to represent or sign for the entity. Upload PAN is a mandatory file upload of the entity's PAN document. Business PAN is a mandatory PAN input field for the business/entity. Applicant Name is a mandatory text field for the entity/business name used in the application.

2. Udyam / Registration

This table lists the Udyam/Registration fields for an Entity applicant. "Is Udyam Number Available?" is a mandatory Yes/No field. "Send Link to Generate Udyam" is an action/link used to send a Udyam-generation link when needed. "Registered Business Name From GST?" is a conditional selection indicating whether the business name should be pulled from GST data. "Registered Business Name" is a mandatory text field for the entity's legal business name.

Conditional relationship:

This diagram shows that if the answer to "Is Udyam Number Available?" is No, the system offers the "Send Link to Generate Udyam" action so the entity can obtain one. If the answer is Yes, this action is not required.

3. Business Details

This table lists the Business Details fields for an Entity applicant, all mandatory: Date of Incorporation (date the entity was incorporated), CIN Number (Corporate Identification Number), Applicant Constitution Type (legal structure — private, public, or trust), Customer Classification Basis (basis used to classify the customer/entity), Turnover (business turnover figure), Nature of Business (type of business activity), Industry (broad sector of operation), and Sub-Industry (more specific segment within the industry).

Business Classification Relationship This diagram shows a cascading dependency: selecting the Nature of Business determines which Industry options are available, and selecting the Industry in turn determines which Sub-Industry options are available.

4. Business Address

This table lists the Business Address fields, all mandatory: Address Line (up to 230 characters, main business address), Business Address Pin Code (PIN code of that address), Business Address Type (whether the premises are Owned or Rented), and No. of Months at Business Address (how long the entity has operated there).

Business Address Type

- Owned → business premises are owned.
- Rented → business premises are rented/leased.

5. Authorized Signatory

This table lists two mandatory Authorized Signatory fields: Authorized Signatory Email ID (email address) and Authorized Signatory Full Name (full name of the person representing the entity). The authorized signatory is the person representing the entity in the application process.

6. Business Identification

This table repeats and elaborates the cascading business-classification fields: Nature of Business is a dropdown identifying the primary business activity and drives which Industry options appear; Industry is a dropdown for the

broad sector, dependent on the chosen Nature of Business; Sub-Industry is a dropdown for the specific line of business, dependent on the chosen Industry; and Business Address Type is a radio button specifying whether the business premises are owned or rented.

6.1. Nature of Business

This table defines the three Nature of Business values. "Manufacturing" means the business produces, assembles, processes, or converts raw materials into finished goods. "Service" means the business provides services rather than physical products. "Trading" means the business buys and sells goods without significant manufacturing involved.

Examples

- Manufacturing: Industrial equipment manufacturing, Food processing, Auto component production
- Service: Educational institutes, IT services, Healthcare services, Hospitality services
- Trading: Wholesale distributors, Retail businesses, Commodity traders

6.2. Industry

The Industry options vary depending on the selected Nature of Business. Industry list: Auto Components, Chemical Allied, Education Allied, Electrical Equipment / Electrical Allied, Food Related, Light Engineering Allied, Hospitality, Healthcare Allied, Others Field Description: Industry identifies the broader sector to which the applicant's business belongs and is used for risk assessment, policy eligibility, portfolio classification, and underwriting.

6.3. Sub-Industry

The available Sub-Industry options depend on the selected Industry.

Auto Components Possible Sub-Industries: Auto Parts Manufacturing, Vehicle Accessories, Engine Components, Brake Components, Suspension Components, Auto Electrical Components, Automotive Assemblies, Sheet Metal Components Description: Businesses involved in manufacturing, supplying, or trading automobile-related parts and accessories.

Chemical Allied Possible Sub-Industries: Industrial Chemicals, Specialty Chemicals, Paints & Coatings, Fertilizers, Agro Chemicals, Petrochemical Products, Cleaning Products, Chemical Trading Description: Businesses engaged in manufacturing, processing, or distribution of chemical products.

Education Allied Possible Sub-Industries: Educational Institutes, Training Centers, Coaching Classes, Educational Products, E-Learning Services, Educational Consultancies, Skill Development Institutes, Vocational Training Centers Description: Businesses providing educational services, products, training, and learning solutions.

Electrical Equipment / Electrical Allied Possible Sub-Industries: Electrical Appliances, Power Equipment, Lighting Equipment, Electrical Components, Industrial Electrical Products, Consumer Electronics, IT Hardware Services, Electronic Equipment Trading Description: Businesses engaged in manufacturing, servicing, or trading electrical and electronic equipment.

Food Related Possible Sub-Industries: Food Processing, Restaurants, Food Manufacturing, Bakery Products, Dairy Products, Beverage Production, Catering Services, Packaged Foods Description: Businesses involved in food production, processing, distribution, or food-related services.

Light Engineering Allied Possible Sub-Industries: Fabrication Units, Machine Components, Tool Manufacturing, Engineering Workshops, Industrial Machinery Parts, Precision Components, Metal Products, Power Driven Tools Description: Businesses engaged in light engineering, fabrication, tool production, and component manufacturing.

Hospitality Possible Sub-Industries: Hotels, Restaurants, Resorts, Guest Houses, Travel Services, Event Management, Banquet Services, Tourism Services Description: Businesses providing accommodation, food, tourism,

and hospitality-related services.

Healthcare Allied Possible Sub-Industries: Hospitals, Clinics, Diagnostic Centers, Medical Equipment Suppliers, Pharmacies, Pathology Labs, Healthcare Services, Healthcare Consultancies Description: Businesses involved in delivery of healthcare services and healthcare-related products.

Others Possible Sub-Industries: Miscellaneous Services, General Trading, Consulting Services, Professional Services, Business Support Services, Other Activities not explicitly classified above Description: Used when the applicant's business activity does not fall under predefined industries.

6.4. Business Address Type

This table defines the two Business Address Type values. "Owned" means the applicant or business entity owns the premises. "Rented" means the premises are occupied under rent, lease, or tenancy.

Business Purpose This field helps determine: Stability of business operations; Address verification requirements; Additional document requirements; Risk assessment during underwriting.

9. Customer Classification Basis

This table defines the three bases on which customer classification can be determined. "CA Certificate" means classification is based on a Chartered Accountant's certificate validating turnover, financial position, or MSME categorization. "Declaration by Client in Application Form" means classification is based purely on the applicant's self-declared information, with no independent certification required. "Financial" means classification is based on submitted financial documents such as audited statements, balance sheets, or profit & loss statements.

8. Communication Address

This single-row table shows the mandatory Yes/No field that determines whether the entity's communication address matches its business address. If Yes: The business address is used as the communication address. If No: The following separate communication-address fields are required: This table lists the fields required when the communication address differs from the business address: three address lines (with character limits of 77, 77, and 76 respectively), a PIN code, a selection of whether the premises are Owned or Rented, an optional Property Owner Name, and the number of months at that communication address.

Conditional Flow

This diagram shows that if the applicant confirms the communication address is the same as the business address (Yes), the business address is reused as the communication address. If not (No), the applicant must enter a separate communication address.

7. Additional Address

This single-row table shows the "Add Another Address" action, which lets the user attach an additional address to the application. The exact fields and number of additional addresses supported are not provided in the supplied information.

3.3 Main Applicant — Individual Applicant

This flow is used when the applicant is an Individual, including an Individual applicant in the HL (Home Loan) flow.

1. Applicant Information

This table lists the Applicant Information fields for an Individual applicant: Applicant Type (identifies the applicant as an Individual), Mobile Number (mandatory), Upload PAN (mandatory file upload), PAN Card Number (mandatory PAN input), and Name as per PAN (mandatory, the applicant's name exactly as it appears on their PAN card).

2. Residence Details

This table lists the Residence Details fields, all mandatory: Address Line 1 (up to 230 characters), Residence Address Pin Code, Resident Address Type (Owned or Rented), and No. of Months at Resident Address (duration of stay).

Resident Address Type

- Owned → residence is owned by the applicant.
- Rented → residence is rented/leased.

3. Personal Details

This table lists the Personal Details fields for an Individual applicant, all mandatory: Date of Birth, Gender, Are You Differently Abled (Yes/No), Mother's Name, Father's Name, Applicant Marital Status, and Religion. The exact available dropdown values for Gender, Marital Status and Religion are not provided in the supplied information.

4. Documents

This single-row table shows the mandatory Upload Address Proof Document field, used to verify the applicant's residential address.

Accepted Documents This table lists the four accepted address-proof document types: Aadhaar Card (government-issued ID with address details, commonly used for identity and address verification), Voter ID Card (Election Commission-issued ID that can serve as proof of residence), Driving License (valid license issued by the transport authority containing the applicant's residential address), and Passport (Government of India-issued passport serving as both identity and address proof).

5. Employment Information

This table lists the Employment Information fields: Net Monthly Salary/Income (mandatory), Total Experience in Months (mandatory), Experience in Current Company in Months (mandatory), and the non-mandatory Current Employer Name, Current Employer Address (up to 230 characters), and Current Employer Address Pincode.

6. Contact Information

This table lists two email fields: the optional Official Email ID (professional email, where applicable) and the mandatory Email ID (used for communication).

7. Education & Category

This table lists two mandatory dropdown fields: Category (the applicant's applicable category) and Educational Qualification (the applicant's education level).

8. Current Address

This single-row table shows the mandatory Yes/No field that determines whether the applicant's current address is the same as their residence address. If Yes: The residence address can be treated as the current address. If No: Separate current-address details are required: This table lists the fields required when the current address differs from the residence address: Current Address (up to 230 characters, mandatory), Current Address Type (Owned or Rented, mandatory), Current Pin Code (mandatory), No. of Months at Current Address (mandatory), and the optional Property Owner Name.

9. Marital Status, Caste & Religion

Applicant Details This table lists the Marital Status field, with possible values Single, Married, Divorced, or Widowed, and the Religion field, with possible values Hinduism, Islam, Christianity, Sikhism, Buddhism, Jainism, or Other, covering all major religions practiced in India.

Conditional Fields If Marital Status = Married, the following additional fields appear: This table shows the two additional fields — Spouse Name and Spouse Religion — that appear only when the applicant's Marital Status is set to Married. Business Rule: Spouse details are required only when the applicant selects Married as the marital status.

Conditional Flow

This diagram shows that if the applicant's current address is the same as their residence address (Yes), the residence address is reused as the current address; if not (No), the applicant must enter a separate current address.

C. Entity vs Individual — Input Difference

This comparison table summarizes the differences between the Entity and Individual/Home Loan (HL) Quick Data Entry flows, area by area. For Applicant Type, Entity flow uses "Entity" and Individual flow uses "Individual". For Mobile, Entity flow captures the Authorized Signatory Mobile while Individual flow captures the Applicant's own Mobile. For PAN, Entity flow requires an uploaded PAN plus a Business PAN, while Individual flow requires an uploaded PAN plus a PAN Card Number. For Name, Entity flow captures the Applicant/Entity Name while Individual flow captures the Name as per PAN. Udyam, GST, Incorporation Date, CIN Number, Constitution Type, Customer Classification Basis, Turnover, and the Nature/Industry/Sub-Industry business classification chain are all captured only in the Entity flow and are not part of the Individual flow. For Address, Entity flow captures the Business Address while Individual flow captures the Residence Address. Authorized Signatory Name and Email, and Business Address Type (Owned/Rented), apply only to the Entity flow. Residence Address Type (Owned/Rented) applies only to the Individual flow. Communication Address (same-as-business logic) applies only to Entity flow. Personal Details (Date of Birth, Gender, Parents' names, Marital Status, Religion), Employment details (Salary/Income, Experience, Employer), Education (Category and Educational Qualification), and Address Proof upload apply only to the Individual flow. For Current Address, Entity flow uses the Communication Address concept while Individual flow uses its own Current Address concept. Finally, "Add Another Address" (the ability to add extra addresses) applies only to the Entity flow and is not listed for Individual flow.

D. Quick RAG Summary

Entity Entity Quick Data Entry (QDE) captures: Entity Identity → PAN/Udyam/GST → Registration → Constitution → Classification → Turnover → Business Nature → Industry/Sub-Industry → Business Address → Authorized Signatory → Communication Address → Additional Address This chain describes the order in which Entity Quick Data Entry information is logically captured: starting with Entity Identity, then PAN/Udyam/GST details, then Registration information, then Constitution Type, then Classification Basis, then Turnover, then Business Nature, then Industry/Sub-Industry, then Business Address, then Authorized Signatory details, then Communication Address, and finally any Additional Address.

Individual / Home Loan (HL) Individual Quick Data Entry captures: Individual Identity → PAN → Residence → Personal Details → Address Proof → Income/Employment → Contact → Education/Category → Current Address This chain describes the order in which Individual/HL Quick Data Entry information is logically captured: starting with Individual Identity, then PAN, then Residence details, then Personal Details, then Address Proof, then Income/Employment information, then Contact information, then Education/Category, and finally Current Address.

Main Decision This diagram shows the top-level branching logic for Quick Data Entry based on Applicant Type. If the applicant is an Entity, the flow captures Business/Legal Information, then Business Address, then Communication Address. If the applicant is Individual/HL, the flow captures Personal/Income Information, then Residence details, then Current Address.

RAG rule: When retrieving Quick Data Entry information, first identify whether the user is asking about the Entity or Individual / HL Applicant flow. Do not combine fields from the two flows unless the question explicitly asks for a

comparison.

Stage 3.2 — Quick Data Entry (QDE): Co-Applicant

Condition: A minimum of one female co-applicant is required as part of the loan application process. Applicants may add multiple co-applicants based on eligibility and business requirements. Having a higher number of co-applicants can strengthen the overall loan application by providing additional financial support, shared repayment responsibility, and enhanced credit backing. As a result, applications with multiple eligible co-applicants may have a better chance of meeting loan sanction and underwriting criteria, subject to the lender's credit policy and assessment.

Purpose

After the Main Applicant details are completed, the application can include one or more Co-Applicants. A Co-Applicant can be classified as either:

- Individual
- Entity

The fields displayed for the Co-Applicant depend on the selected Customer Type. The Co-Applicant journey also contains an Income Considered field that determines whether the Co-Applicant's income is considered in the loan application.

1. Co-Applicant — Initial Selection

Customer Type Type: Selection Options:

- Individual
- Entity

Meaning: Customer Type determines which Co-Applicant data-entry structure is displayed. This diagram shows that adding a Co-Applicant requires selecting a Customer Type of either Individual or Entity. Selecting Individual displays the Individual Co-Applicant field set; selecting Entity displays the Entity Co-Applicant field set.

Rule

Customer Type = Individual → Use the Individual Co-Applicant field set. Customer Type = Entity → Use the Entity Co-Applicant field set. Individual and Entity fields should not be combined when answering a field-specific question.

2. Income Considered

Type: Radio Button / Boolean Options:

- Yes
- No

Meaning: Determines whether the Co-Applicant's income is considered in the loan application. This diagram shows that if Income Considered is set to Yes, the Co-Applicant's income is factored into the loan application; if set to No, the Co-Applicant's income is not factored in. If Yes: The Co-Applicant's income is considered for the application. The exact additional income fields or downstream behaviour depend on the selected Co-Applicant type and the configured SkaleUp workflow. If No: The Co-Applicant's income is not considered. The supplied process information does not define which fields become hidden, optional, or unavailable when No is selected.

3. Individual Co-Applicant

When: Customer Type = Individual, the Individual Co-Applicant field set is used. The Individual Co-Applicant captures identity, personal information, relationship information, residence details, address proof and current-address information.

3.1 Individual — Customer and Income

This table lists two fields: Customer Type (identifying the Co-Applicant as an Individual) and Income Considered (Yes/No, indicating whether this Co-Applicant's income counts toward the application).

3.2 Individual — Identity Information

This table lists the Identity Information fields for an Individual Co-Applicant: Mobile Number, Personal PAN, Upload PAN, Applicant Name, Date of Birth, Gender, and Are You Differently Abled.

3.3 Individual — Relationship Information

This table lists the Relationship Information fields for an Individual Co-Applicant: Relationship (a category), Relationship with Primary Applicant/Co-applicant (specifying how this Co-Applicant relates to the Primary Applicant or another Co-Applicant), and Relationship Name (the name tied to that relationship).

3.4 Individual — Personal Information

This table lists the Personal Information fields for an Individual Co-Applicant: Profession, Caste Category, Religion, Father's Name, Mother's Name, Applicant Marital Status, Educational Qualification, Email ID, and Guarantor (a selection/boolean field capturing guarantor status). The exact options for these fields are not provided in the available process information.

3.5 Individual — Residence Information

This table lists the Residence Information fields for an Individual Co-Applicant: Residence Address Pin Code, Address Line, Resident Address Type (Owned or Rented), No. of Months at Resident Address, and Upload Address Proof Document.

Resident Address Type Owned → Residence is owned. Rented → Residence is rented/leased.

4. Individual — Current Address

Is Current Address Same as Residence Address? Type: Radio Button / Boolean Options:

- ☐ Yes
- ☐ No

Meaning: Determines whether the Co-Applicant's current address is the same as the residence address. This diagram shows that if the Individual Co-Applicant's current address matches their residence address (Yes), the residence address applies as the current address; if not (No), separate current-address details must be entered. If Yes: The residence address is also treated as the current address. If No: Separate current-address information is captured: This table lists the separate current-address fields captured for an Individual Co-Applicant when their current address differs from their residence: three address lines, a PIN code, a type (Owned/Rented), the number of months at that address, and an optional property owner name.

Add Another Address Allows an additional address to be added for the Individual Co-Applicant.

5. Entity Co-Applicant

When: Customer Type = Entity, the Entity Co-Applicant field set is used. The Entity Co-Applicant captures business identity, Udyam/GST information, registration information, authorized-signatory information, relationship, business

classification, guarantor information, business address and communication address.

5.1 Entity — Customer and Income

This table lists Customer Type (identifying the Co-Applicant as an Entity) and the mandatory Income Considered field (Yes/No). Options: Yes / No

5.2 Entity — Business Identity and Registration

This table lists the Business Identity and Registration fields for an Entity Co-Applicant, most of them mandatory: Authorized Signatory Mobile Number, Business PAN, Upload PAN, Is Udyam Number Available, Send Link to Generate Udyam (conditional action), Registered Business Name From GST (selection), Registered Business Name, Applicant Name, Business Address Pin Code, Address Line (up to 230 characters), Date of Incorporation, and CIN Number.

Udyam Rule This diagram shows that if the Entity Co-Applicant does not have a Udyam Number available (No), the system offers the Send Link to Generate Udyam action; this action is not needed when the answer is Yes.

6. Entity — Authorized Signatory

This table lists two mandatory Authorized Signatory fields for the Entity Co-Applicant: Full Name and Email ID.

7. Entity — Relationship

This table lists two mandatory Relationship fields for the Entity Co-Applicant: Relation (the relationship category) and Relationship Name (the name tied to that relationship). The exact relationship options are not provided in the available process information.

8. Entity — Business Classification

This table lists the mandatory Business Classification fields for the Entity Co-Applicant: Applicant Constitution Type, Customer Classification Basis, Turnover, Nature of Business, Industry, and Sub-Industry.

Business Classification Relationship As with the Main Applicant Entity flow, this diagram shows that Nature of Business determines the available Industry options, which in turn determine the available Sub-Industry options.

9. Entity — Guarantor

Corporate Guarantor * Type: Radio Button / Boolean Options:

- ☐ Yes
- ☐ No

Meaning: Indicates whether a Corporate Guarantor is associated with the Entity Co-Applicant. The supplied process information does not specify any additional fields triggered by Yes or No.

10. Entity — Business Address

This table lists two mandatory Business Address fields for the Entity Co-Applicant: Business Address Type (Owned or Rented) and No. of Months at Business Address. The Entity business address itself consists of:

- ☐ Address Line (Max 230 chars) *
- ☐ Business Address Pin Code *

Business Address Type Owned → Business premises are owned. Rented → Business premises are rented/leased.

11. Entity — Communication Address

Communication Address Same as Business Address * Type: Radio Button / Boolean Options:

- Yes
- No

Meaning: Determines whether the Entity's communication address is the same as its business address. This diagram shows that if the Entity Co-Applicant's communication address is the same as its business address (Yes), the business address is reused for communication purposes; if not (No), a separate communication address must be provided. If Yes: The business address is used as the communication address. If No: The following communication-address fields apply: This table lists the separate communication-address fields required for the Entity Co-Applicant when the communication address differs from the business address: three address lines, a PIN code, a type (Owned/Rented), an optional property owner name, and the number of months at that address.

Add Another Address Allows an additional address to be added for the Entity Co-Applicant.

12. Individual vs Entity — Core Difference

This diagram shows the top-level branching of the Co-Applicant flow. A Co-Applicant is either Individual or Entity. For an Individual Co-Applicant, Personal Information is captured, which branches into PAN details, Personal Details, and Residence details. For an Entity Co-Applicant, Business Information is captured, which branches into PAN, Registration, and Business details, and then flows sequentially through Authorized Signatory information, Business Classification, Business Address, and Communication Address.

Individual Co-Applicant captures: Identity → Relationship → Personal Details → Residence → Address Proof → Current Address

Entity Co-Applicant captures: Business Identity → Udyam/GST → Registration → Authorized Signatory → Relationship → Business Classification → Corporate Guarantor → Business Address → Communication Address

13. Conditional Rules for RAG

The following rules should be treated as explicit decision rules by the RAG chatbot.

Rule 1 — Co-Applicant Type IF Customer Type = Individual THEN retrieve Individual Co-Applicant fields. IF Customer Type = Entity THEN retrieve Entity Co-Applicant fields.

Rule 2 — Income Considered IF Income Considered = Yes THEN Co-Applicant income is considered. IF Income Considered = No THEN Co-Applicant income is not considered. The supplied information does not define the exact field visibility or mandatory behaviour resulting from No.

Rule 3 — Individual Current Address IF Customer Type = Individual AND Current Address Same as Residence Address = Yes THEN Residence Address applies as the Current Address. IF Customer Type = Individual AND Current Address Same as Residence Address = No THEN Current Address fields apply.

Rule 4 — Entity Udyam IF Customer Type = Entity AND Is Udyam Number Available = No THEN Send Link to Generate Udyam is applicable.

Rule 5 — Entity Communication Address IF Customer Type = Entity AND Communication Address Same as Business Address = Yes THEN Business Address is used as Communication Address. IF Customer Type = Entity AND Communication Address Same as Business Address = No THEN Communication Address fields apply.

Rule 6 — Entity Corporate Guarantor IF Customer Type = Entity THEN Corporate Guarantor field is applicable. Corporate Guarantor = Yes/No The supplied process does not define additional fields triggered by the selection.

Stage 4 — Bureau Summary & Consent Flow

Purpose

The Bureau Summary & Consent Flow stage follows Quick Data Entry (QDE) for the Main Applicant and Co-Applicants. This stage is used to:

1. Display each applicant included in the loan application. 2. Obtain the required bureau

consent. 3. Verify consent using an OTP. 4. Perform/retrieve the applicable bureau information after successful consent. 5. Display the bureau check status against the respective applicant. 6. Display available credit information such as CIBIL (Credit Information Bureau India Limited) Commercial Rank (CMR) and commercial credit facilities for an Entity. 7. Allow the Business Development Executive (BDE) to proceed to the next stage when the required process conditions are satisfied. The Bureau Summary is applicant-specific. The Main Applicant and every Co-Applicant are displayed separately.

1. Bureau Summary Tracker

The Bureau Summary screen is accessed after completing Quick Data Entry. The tracker displays the workflow sequence: This diagram shows that the Bureau Summary stage directly follows the Quick Data Entry stage in the tracker sequence. Quick Data Entry: Indicates that the applicant and Co-Applicant data-entry stage has been completed/currently completed. Bureau Summary: Represents the bureau-consent and bureau-information stage.

2. Applicant-wise Bureau Summary

The Bureau Summary displays a separate card/record for each applicant. The screen can contain:

- Main Applicant
- Co-Applicant 1
- Co-Applicant 2
- Additional Co-Applicants, if applicable

Each applicant record is independent and displays its own bureau/consent status.

Applicant Card This table lists the pieces of information shown on each applicant's Bureau Summary card: Applicant Name, Applicant Role (Main Applicant or Co-Applicant), Consent Status (whether consent has been received), Link Status (whether the consent link has been sent), Bureau Check Status (status of the bureau check after consent), and Consent Action (an action to send or resend the consent link).

3. Consent Process

Consent is required before the bureau-check process can be completed. The observed flow is: This flowchart describes the end-to-end consent process. Starting from the Applicant or Co-Applicant record, the process moves to the Bureau Summary screen, where a Send Consent Link action is triggered. This leads to the Consent Step, where the applicant checks a Consent Checkbox, then receives and enters an OTP for OTP Verification. Once verification succeeds, Consent is marked Completed, and the process moves on to the Bureau Check.

4. Send Consent Link

The Bureau Summary provides a consent-link action for the applicant. The screen may initially show: "Consent not received" and: "Link Sent" Meaning: Link Sent means the consent link has been sent. Consent not received means the required consent has not yet been completed/received. These are separate statuses. This shows that "Link Sent" and "Consent Received" are two distinct, non-equivalent statuses — sending the link does not automatically mean consent has been received. A link can therefore be sent while the consent status is still: "Consent not received"

5. Consent Checkbox

After initiating the consent process, the Business Development Executive (BDE) reaches the consent step. A consent checkbox is presented as part of the consent process. The BDE provides/accepts the required consent before continuing with the verification process. This diagram shows that after the consent link/step, the applicant checks the Consent Checkbox, which marks consent as Given, and then the process moves to the OTP step. The exact wording of the consent statement is not defined in the supplied process information and should not be assumed.

6. OTP Verification

After the consent step, an OTP is used for verification. Based on the observed workflow, the BDE receives the OTP through the UGRO registered communication channel, such as the UGRO email/registered contact available to the BDE. The BDE enters the received OTP into the application. This flowchart describes the OTP process: after Consent, an OTP is generated and sent to the Business Development Executive (BDE)'s registered communication channel (such as UGRO email/registered contact). The BDE receives this OTP and enters it into the application, which then goes through OTP Verification. RAG Definition: OTP Verification is the verification step performed after the consent action. Successful OTP verification allows the process to continue toward the bureau check. The exact OTP delivery mechanism and backend verification service are not defined in the supplied process documentation.

7. Bureau Check

After the consent and OTP verification process is completed, the application proceeds to the bureau check. The bureau check retrieves/updates the available bureau information for the respective applicant. The Bureau Summary then displays a bureau check status alongside the applicant name. This diagram shows the sequence from Consent to OTP Verification to Bureau Check, which produces a Bureau Check Status and ultimately the Bureau Information itself. Important RAG distinction: The following are separate stages/statuses: Consent → OTP Verification → Bureau Check → Bureau Result. The chatbot should not treat "consent received" as equivalent to "bureau check completed."

8. Bureau Check Status

After the bureau process is initiated/completed, the applicant's bureau check status is visible alongside the applicant name. This allows the BDE to identify the bureau-processing status of each applicant separately. For example: This diagram shows that each applicant — the Main Applicant, Co-Applicant 1, Co-Applicant 2, and so on — has their own independent Bureau Check Status displayed separately. The exact status values available in the application are not fully defined in the supplied information. Therefore, the RAG chatbot should not invent additional status names.

9. Commercial Bureau Information

For an Entity/Business Applicant, the Bureau Summary can display Commercial Bureau / CIBIL (Credit Information Bureau India Limited) Commercial information. This information is used to assess the business's commercial credit profile and existing borrowing behaviour. The observed commercial bureau information includes:

- Applicant Name
- CIBIL Commercial Rank (CMR) / CMR
- CIBIL Trade-in Details
- Commercial Bureau credit facilities

10. CIBIL (Credit Information Bureau India Limited) Commercial Rank — CMR

CMR Meaning: CMR = CIBIL MSME Rank. CMR is a commercial credit-risk rank for an eligible business/MSME. The CMR scale ranges from: CMR-1 to CMR-10

Interpretation This diagram shows the CMR scale running from CMR-1, which represents the strongest credit profile / lowest risk, through CMR-2 to CMR-9 in increasing order of risk, down to CMR-10, which represents the weakest credit profile / highest risk. In other words, as the CMR number increases from 1 to 10, risk increases and credit strength decreases.

General RAG Classification This table groups the CMR scale into three risk bands. CMR-1 through CMR-4 represents a stronger commercial credit profile. CMR-5 through CMR-7 represents a moderate or intermediate risk range. CMR-8 through CMR-10 represents a higher-risk, weaker commercial credit profile. Important: A higher numerical CMR is not better. This reiterates that a lower CMR number indicates a better, lower-risk credit profile, while a higher CMR number indicates a weaker, higher-risk credit profile. CMR should be treated as a risk indicator, not as an automatic loan approval or rejection decision.

11. Example — CMR-8

The supplied test example contains:

- Applicant: TEST1 PRIVATE LIMITED
- CIBIL Commercial Rank: CMR-8

Interpretation: CMR-8 represents a relatively higher-risk commercial credit profile compared with lower CMR ranks. However: CMR-8 does not by itself mean that the loan will be rejected. The lender should consider the CMR along with the detailed commercial bureau information and other underwriting inputs.

12. Commercial Bureau — Credit Facilities

The Commercial Bureau section can display the business's existing credit facilities. Each facility provides information about an existing borrowing/credit relationship. The supplied test example contains two facilities.

Facility 1 This table describes Facility 1 for the test example applicant TEST1 PRIVATE LIMITED: it was sanctioned for ₹10,00,000 on 20/01/2025, currently has an outstanding balance of ₹8,10,223 and an overdue amount of ₹34,325, was last reported on 31/05/2026, the credit facility member is Not Disclosed, and the facility type is Medium Term Loan. Interpretation: The facility has ₹8,10,223 outstanding and ₹34,325 overdue. The presence of an overdue amount indicates that an amount is currently reported as overdue/delayed for this facility.

13. Facility 2

This table describes Facility 2 for the same test example applicant: it was sanctioned for ₹2,50,000 on 29/03/2024, currently has an outstanding balance of ₹2,49,358 and an overdue amount of ₹0, was last reported on 15/01/2025, the credit facility member is Not Disclosed, and the facility type is Cash Credit. Interpretation: The facility has ₹2,49,358 outstanding and ₹0 overdue. Therefore, no overdue amount is reported for this facility in the displayed bureau information.

14. Commercial Bureau Credit Assessment Context

The Bureau Summary should not be interpreted using only the CIBIL (Credit Information Bureau India Limited) MSME Rank (CMR). The available information can be viewed as: This diagram shows that Commercial Bureau information has two parts. The first part is the CMR, which serves as an overall commercial risk indicator. The second part is Credit Facilities, which each contain details such as Sanctioned Amount, Outstanding Balance, Overdue Amount, Sanctioned Date, Last Reported Date, and Facility Type. The Business Development Executive (BDE)/lender can therefore see both: Overall commercial risk indicator → CMR, and Detailed borrowing behaviour → Credit facilities and overdue information

15. Test Example — Bureau Summary Interpretation

For the supplied test Entity:

- Applicant: TEST1 PRIVATE LIMITED
- CMR: CMR-8
- Commercial Facilities: 2

Facility exposure shown: Total sanctioned amount: ■10,00,000 + ■2,50,000 = ■12,50,000 Total outstanding balance: ■8,10,223 + ■2,49,358 = ■10,59,581 Total overdue amount: ■34,325 + ■0 = ■34,325 This calculation shows the combined totals across both facilities for the test applicant: total sanctioned amount is ■12,50,000 (■10,00,000 from Facility 1 plus ■2,50,000 from Facility 2), total outstanding balance is ■10,59,581 (■8,10,223 plus ■2,49,358), and total overdue amount is ■34,325 (■34,325 from Facility 1 plus ■0 from Facility 2). RAG interpretation: The displayed example indicates: The Entity has a CMR-8, which is in the higher-risk range. Two commercial credit facilities are displayed. One facility has ■34,325 overdue. The second facility has ■0 overdue. The displayed total sanctioned exposure is ■12,50,000. The displayed total outstanding exposure is ■10,59,581. This is a description of the information visible in the bureau report. It should not be interpreted as an automatic approval/rejection decision.

16. Bureau Summary Actions

Re-Send Consent Link Purpose: Allows the consent link to be sent again for an applicant when required. This diagram shows that when an applicant's status is "Consent not received," the Re-Send Consent Link action can be used, which repeats the consent process from the start.

Other Icons The screen displays additional icons, including an external-link-style icon and a copy-style icon. Their exact functions have not been established from the supplied process information. Therefore: The RAG chatbot must not assign a specific function to these icons unless their behaviour is separately documented.

17. Proceed

The Bureau Summary contains a Proceed button. In the supplied screenshot, the button is displayed in a disabled/greyed-out state while the applicants show "Consent not received." The screenshot does not conclusively establish the complete rule for enabling Proceed. Therefore, the RAG system should use the following wording: "Proceed is displayed on the Bureau Summary screen. In the observed state, it is disabled while consent has not been received. The exact conditions required to enable Proceed are not defined in the available process documentation." Do not assume that every applicant must necessarily have a particular bureau status unless this is confirmed by the actual application behaviour.

18. Complete Stage 4 Workflow

This end-to-end flowchart summarizes Stage 4. Starting from Bureau Summary, the process moves through Applicant-wise Records, Consent Status, Send Consent Link, Consent Checkbox, OTP Verification, Consent Completed, Bureau Check, Bureau Check Status, and Bureau Information. At this point the flow splits by applicant type: for an Individual, the result is Individual Bureau Information; for an Entity, the result is Commercial Bureau / CIBIL (Credit Information Bureau India Limited) Commercial information, which includes the CIBIL MSME Rank (CMR) and Commercial Facilities (with details such as Sanctioned Amount, Outstanding Balance, Overdue Amount, and Facility Type). Both paths lead toward the Proceed step.

19. RAG Decision Rules

The chatbot should treat the following as explicit rules. Rule 1 — Stage Sequence Quick Data Entry (QDE) → Bureau Summary Bureau Summary follows completion of applicant and Co-Applicant Quick Data Entry. Rule 2 — Applicant-wise Processing Main Applicant → Individual Bureau Record Co-Applicant → Individual or Entity Bureau Record Each applicant has an independent bureau/consent status. Rule 3 — Consent Consent not received → Consent action required → Send/Re-send Consent Link Rule 4 — OTP Consent Step → OTP → OTP Verification OTP verification is distinct from consent and bureau checking. Rule 5 — Bureau Check Successful consent/OTP process → Bureau Check → Bureau Check Status → Bureau Information Rule 6 — Entity Commercial Bureau For an Entity, the available bureau information can include: CIBIL (Credit Information Bureau India Limited) Commercial → CMR → Commercial Bureau → Credit Facilities Rule 7 — CMR CMR-1 → Strongest / Lowest Risk CMR-10 → Weakest / Highest Risk Lower CMR is generally better. Rule 8 — Overdue Overdue Amount > ■0 → An overdue

amount is reported for that facility. Overdue Amount = ■0 → No overdue amount is reported for that facility. The presence of an overdue amount should not by itself be converted into a loan rejection rule. Rule 9 — Proceed The screenshot shows Proceed disabled while consent has not been received, but the complete enablement condition is not established.

20. RAG Retrieval Keywords

The following terms should map to this stage: Bureau Summary, Bureau Check, Bureau Status, Consent, Consent Link, Send Consent Link, Re-Send Consent Link, Consent Not Received, Consent Checkbox, OTP, OTP Verification, Bureau Information, Commercial Bureau, CIBIL Commercial, CIBIL MSME Rank (CMR), CMR, CMR-1, CMR-8, CMR-10, Credit Facility, Sanctioned Amount, Outstanding Balance, Overdue Amount, Last Reported Date, CF Type, Medium Term Loan, Cash Credit, Proceed.

Master Summary

Stage 4 — Bureau Summary & Consent Flow follows Quick Data Entry (QDE). It displays the

Main Applicant and Co-Applicants separately and tracks their individual consent and bureau-check status. The consent process involves sending a consent link, completing the required consent checkbox, receiving and entering an OTP, and completing OTP verification. After successful consent processing, the application proceeds to the bureau check and displays the applicable bureau-check status and bureau information. For Entity applicants, the Bureau Summary can display Commercial Bureau/CIBIL (Credit Information Bureau India Limited) Commercial information, including the CIBIL MSME Rank (CMR) and individual commercial credit facilities. CMR ranges from CMR-1 to CMR-10, where lower ranks indicate stronger/lower-risk commercial credit profiles and higher ranks indicate weaker/higher-risk profiles. The commercial facilities can show sanctioned amount, sanctioned date, outstanding balance, overdue amount, last reported date, CF member and facility type. Bureau information is used as credit-risk information and should not by itself be interpreted as an automatic loan approval or rejection decision. The screen also provides applicant-level consent-link actions and a Proceed button; the exact Proceed enablement conditions are not fully defined by the supplied process evidence.

Stage 5 — Soft Assessment / Soft Approval

Purpose

The Soft Assessment / Soft Approval stage collects the applicant's financial information, property details, business stability information, proposed loan terms, and mandatory property documents. The information entered on this screen is used to perform a preliminary loan eligibility calculation. The stage contains mandatory fields marked with *. The applicant must satisfy the applicable validations and provide the required document before the Calculate Eligibility action can be used.

1. Applicant Financial Details

This section captures the applicant's income and existing financial obligations.

1.1 Monthly Gross Income

Field: What is your monthly gross income? * Type: Numeric input Meaning: The applicant's total monthly income before deductions. The value is used to determine the applicant's available income after considering existing obligations.

1.2 Monthly Obligations

Field: What are your monthly obligations? * Type: Numeric input Meaning: Captures the applicant's existing monthly financial commitments, such as: Existing loan EMI's, Other repayment obligations, Credit card dues, Other applicable monthly liabilities. Current displayed value: 0

1.3 Net Monthly Income

Field: Net Monthly Income * Type: Calculated / system-derived field The net monthly income is derived from the applicant's gross income and monthly obligations.

Calculation

This formula states that Net Monthly Income is calculated by subtracting Monthly Obligations from Monthly Gross Income.

Example

This worked example shows that if the Monthly Gross Income is ■1,00,000 and Monthly Obligations are ■30,000, then the resulting Net Monthly Income is ■70,000 (■1,00,000 minus ■30,000).

Validation

The screen displays a validation message when the calculated net monthly income does not satisfy the configured minimum requirement: "Minimum monthly net income should be [configured minimum/range]." The exact minimum value/range is not provided in the supplied information, so the RAG chatbot should not invent a numerical threshold.

Conditional Logic This diagram shows that Gross Income and Monthly Obligations together determine the Net Monthly Income, which is then checked against a minimum requirement. If the check passes, the process continues; if it fails, a validation message is displayed.

2. Property Details

This section captures information about the property associated with the secured loan assessment.

2.1 Property Value

Field: Property Value * Type: Numeric input Meaning: The market value of the property being considered in the loan assessment. The value is relevant to the assessment of a property-backed/secured loan.

2.2 Property Type

Field: Property Type * Type: Dropdown Default/Placeholder: Select Property Type The field identifies the type/category of property. The supplied screen description gives examples including: Residential, Commercial, Industrial, Mixed Use RAG rule: These are examples provided for the screen; the chatbot should use the actual configured dropdown options when they are available rather than assuming that these are the complete list.

2.3 Usage of Property

Field: Usage of Property * Type: Dropdown Default/Placeholder: Select Usage Identifies how the property is being used. Examples provided include: Self Occupied, Rented, Business Use The selected usage provides additional

context for the property being considered in the assessment.

3. Business Information

This section captures the business vintage and business-location stability of the applicant.

3.1 Business Vintage

Field: What is your business vintage? * Type: Numeric input Minimum: 2 years Placeholder: Years in business

Meaning: The number of years for which the applicant's business has been operating.

Validation

This diagram states that Business Vintage must satisfy a minimum requirement of 2 years. A business vintage below the specified minimum does not satisfy the stated validation requirement.

3.2 Business Stability — Years at Current Address

Field: Business stability – years at current address? * Type: Numeric input Placeholder: Years at current address

Meaning: Captures how long the business has operated from its current business address.

Special Input Rule The screen instructs: "Enter 0 if < 1 year" Therefore: This diagram shows that if the business has operated at its current address for one year or more, the applicant should enter the actual number of years; if the business has operated there for less than one year, the applicant should enter 0. This field measures the stability/continuity of the business at its current location.

4. Loan Parameters

This section captures the proposed loan's interest rate and repayment duration.

4.1 Rate of Interest (ROI)

Field: Rate of Interest (ROI) * Type: Numeric input Unit: % p.a. Meaning: The proposed annual interest rate applicable to the loan. The Business Development Executive (BDE) enters the applicable ROI as a percentage per annum.

4.2 Loan Tenure

Field: Loan Tenure * Type: Numeric input Unit: months Meaning: The proposed duration of the loan repayment period, expressed in months. Example: Loan Tenure = 60 months means the proposed loan duration is 60 months.

5. Mandatory Documents

The Soft Assessment screen also contains a document section.

Document Table This table shows that the mandatory document subcategory/document type on the Soft Assessment screen is the Title Deed, that a Title Deed document is required, and that the available action is to upload or add the document via an icon.

Title Deed The Title Deed is the mandatory document shown on the supplied screen. It is associated with the property being considered in the secured/property-backed loan assessment. The Business Development Executive (BDE) is expected to upload/add the required document through the available action.

6. Calculate Eligibility

At the bottom of the screen, the application displays: "Calculate Eligibility" In the supplied screen, this button is disabled/greyed out. Based on the supplied workflow, eligibility calculation is expected to become available after the applicable requirements are satisfied, including: This diagram shows that the Calculate Eligibility action is expected to become available only once Mandatory Financial Details, Property Details, Business Information, Loan Parameters, the Required Document, and applicable Validation Conditions are all satisfied together. The exact technical condition for enabling the button is not explicitly confirmed by the supplied information. Therefore, the RAG chatbot should not state that every listed field/document is definitively the direct trigger unless confirmed from the application behaviour.

7. Soft Assessment — Overall Data Flow

This diagram shows the overall Soft Assessment data flow. Three parallel sections are captured first: Financial Details (Gross Income, Obligations, Net Income), Property Details (Property Value, Property Type, Property Usage), and Business Details (Business Vintage, Years at Current Address). These all feed into Loan Parameters (ROI and Tenure), which then requires the Mandatory Document (Title Deed), followed by Validation Checks, then the Calculate Eligibility action, which produces the Preliminary Eligibility result.

8. Important Conditional / Validation Rules

Rule 1 — Net Monthly Income The resulting net income must satisfy the configured minimum requirement. The exact minimum amount/range is not provided. Rule 2 — Business Vintage Business Vintage ≥ 2 years The screen specifies a minimum business vintage of 2 years. Rule 3 — Business Address Stability If the business has operated at the current address for less than one year: This restates that when Years at Current Address is less than 1 year, the applicant should enter 0. Rule 4 — Property Information The property section captures: Property Value + Property Type + Property Usage These inputs provide property-related information for the secured loan assessment. Rule 5 — Loan Parameters The proposed loan terms captured are: ROI (% p.a.) + Loan Tenure (months) Rule 6 — Mandatory Document The supplied screen shows: Title Deed → Required The document must be handled through the available upload/add action.

9. RAG Decision Context

When answering questions about this stage, the chatbot should distinguish between entered values, calculated values, validations, and documents.

Financial Gross Income → applicant's monthly income before deductions. Monthly Obligations → existing monthly financial commitments. Net Monthly Income → Gross Income minus Monthly Obligations.

Property Property Value → market value of the property. Property Type → category/type of property. Usage of Property → how the property is being used.

Business Business Vintage → number of years the business has operated; minimum stated requirement is 2 years. Years at Current Address → number of years the business has operated at its current address; enter 0 if less than one year.

Loan ROI → annual interest rate, entered as % p.a. Loan Tenure → loan duration, entered in months.

Document Title Deed → mandatory property document displayed on the screen.

10. Stage Summary

Stage 5 — Soft Assessment / Soft Approval is the preliminary loan eligibility assessment stage.

It collects the applicant's monthly gross income, monthly obligations, calculated net monthly income, property value, property type, property usage, business vintage, business stability at the current address, proposed rate of interest and loan tenure. Net Monthly Income is calculated as Monthly Gross Income minus Monthly Obligations and must satisfy the configured minimum income validation. The screen specifies a minimum business vintage of 2 years. For business stability, the number of years at the current business address is captured, and 0 must be entered when the business has operated at the address for less than one year. The screen also displays a mandatory Title Deed document for upload/addition. After the required inputs, document and validation conditions are satisfied, the application can use Calculate Eligibility to perform the preliminary eligibility assessment. The exact minimum net-income threshold and exact button-enablement conditions are not defined in the supplied information and should not be assumed.

Soft Approval — Applicant-Type Logic This diagram shows the branching logic for Soft Approval based on Applicant Type. For an Individual applicant, no Business Details are required — only Financial Details, Property Details, Loan Parameters, and Documents are captured. For an Entity applicant, Business Information is additionally required, alongside Financial Details, Property Details, Loan Parameters, and Documents.

Individual Applicant For an Individual Applicant, the following sections are applicable:

- Applicant Financial Details: Monthly Gross Income, Monthly Obligations, Net Monthly Income
- Property Details: Property Value, Property Type, Usage of Property
- Loan Parameters: Rate of Interest (ROI), Loan Tenure
- Mandatory Documents: Title Deed, where applicable/required by the displayed workflow

Business Information is NOT asked for an Individual Applicant. Therefore, fields such as: Business Vintage, Years at Current Business Address, are not applicable to the Individual Soft Approval flow.

Entity Applicant For an Entity Applicant, the Soft Approval screen includes the additional Business Information section:

- Business Vintage — minimum 2 years
- Years at Current Address — enter 0 if less than 1 year

The remaining applicable Soft Approval sections continue to capture: Financial Details, Property Details, Loan Parameters, Required Documents

RAG Rule When answering questions about Soft Approval, first identify the applicant type. If the applicant is an Individual, do not retrieve or ask for Business Vintage or Business Stability/Years at Current Address because these business fields are not applicable to the Individual flow. If the applicant is an Entity, Business Information is applicable in addition to the financial, property, loan-parameter and document sections.

Stage 5 — Soft Assessment / Soft Approval: Applicability

The Soft Assessment / Soft Approval stage is not applicable to applicants applying for a Home Loan (HL). This diagram shows that if the loan/applicant type is Home Loan (HL), Soft Approval is not required. For all other applicable loan flows, Soft Approval is required.

Combined RAG Rules The chatbot should determine applicability before asking for Soft Approval fields: 1. Home Loan (HL) applicant — Soft Approval is not asked/performed. Do not ask for Soft Approval financial, property, business or loan-parameter inputs. 2. Individual applicant — applicable non-HL flow — Soft Approval is applicable. Financial, property and loan-parameter information is captured. Business Information is not asked. 3. Entity applicant — applicable non-HL flow — Soft Approval is applicable. Financial, property, loan-parameter and business information are captured. Business Vintage has a stated minimum of 2 years. For Years at Current Address, enter 0 if less than 1 year.

RAG Decision Logic This decision diagram shows the full logic for determining whether and how to present Soft Approval. First, check whether the loan is a Home Loan. If yes, skip Soft Approval entirely. If no, identify the Applicant Type. If the applicant is Individual, no Business Details are needed. If the applicant is Entity, Business Details are applicable. Both branches converge into the overall Soft Approval process.

RAG rule: Always check whether the application is for Home Loan (HL) before retrieving the Soft Approval workflow. If it is an HL application, Soft Approval should not be presented as a required stage.

Stage 6 — Initial Money Deposit (IMD)

Purpose

The Initial Money Deposit (IMD) stage is the payment stage that follows the applicable Soft Approval stage in the GRO Micro Sales (GMSS) loan application journey. At this stage, the applicant is required to pay the applicable initial or login fee before the application can proceed to the subsequent applicable stages.

The applicable Initial Money Deposit (IMD) amount is calculated internally by the system. The Business Development Executive (BDE), Sales Agent, or Sales Owner handling the application facilitates the payment. The amount displayed is specific to the particular application and should not be treated as a universal fixed amount.

1. IMD / Login Fee Details

The Initial Money Deposit (IMD) screen displays the fee to be collected, including the fee type, base or principal amount, applicable tax components, and final total payable amount.

In the supplied example, the screen shows Login Fees with a Principal Fee of ■2,500, CGST of ■225, SGST of ■225, and a Total of ■2,950. This is an observed test example only. The actual amount can differ between applications because it is calculated internally by the system.

RAG rule: If a user asks how much IMD must be paid, explain that the amount is system-calculated and application-specific. Do not assume a fixed amount unless the actual application amount is available.

2. Payment Link

The payment process is initiated through a payment link. The Business Development Executive (BDE), Sales Agent, or Sales Owner handling the application receives the payment link through the applicable registered or UGRO email channel.

The BDE or sales user opens the payment link and continues with payment through the configured payment gateway. Receiving or generating the link does not mean that the IMD payment has been completed.

3. Payment Methods

The payment gateway allows the user to select an available payment method. The observed options include Debit Card, UPI, Net Banking, and Wallets. Debit Card allows payment using an eligible supported debit card. UPI allows payment using supported UPI methods/applications. Net Banking allows payment through supported banking facilities. Wallets allow payment through supported digital wallet options.

The exact methods available can depend on the payment gateway configuration and the options displayed at the time of the transaction.

4. Payment Gateway

The supplied screenshots show Easebuzz as the payment gateway used for the observed transaction. The gateway handles the payment transaction and returns the payment result to the application. The payment process therefore involves the SkaleUp application providing the payment facility, the BDE or sales user accessing the payment link, the configured payment gateway processing the transaction, and the application receiving the resulting payment status.

5. Payment Authentication and OTP

After the payment process is initiated, an authentication step may be required as part of the payment transaction. Based on the supplied process information, OTP is used as an authentication mechanism during the payment process.

OTP is a payment authentication mechanism and should not be interpreted as the loan approval itself. Successful OTP or payment authentication does not independently indicate final loan approval.

6. Successful Payment and Transaction Confirmation

After successful payment, the system records the transaction and displays payment confirmation or a payment summary. The observed payment summary contains information such as Application ID, Fee Type, SkaleUp Transaction ID, Payment Gateway Easebuzz ID, Payment Date and Time, Net Amount Debited, Payment Mode, Product Information, Email ID, and Payment Source.

The IMD Summary screen can also display Fee Amount, Transaction ID, UTR Reference Number, Mode of Payment, Transaction Date and Time, and payment Status. In the supplied successful example, the status is displayed as COMPLETED.

These details establish that the applicable fee transaction has been successfully processed and recorded for the application.

7. Proceeding After IMD

Once payment has been successfully completed and the system records the payment as completed, the BDE can select Proceed and continue to the next applicable stage.

The application should not be treated as having completed IMD merely because a payment link was generated, sent, or opened. Successful payment confirmation is the relevant condition for completion of this payment stage.

8. Important System Behaviour

The IMD amount is system-calculated and may vary between applications. The chatbot should not assume that every applicant pays the same amount. The payment is facilitated through the BDE, Sales Agent, or Sales Owner handling the application, using the payment link provided through the applicable registered or UGRO email channel. The payment gateway handles the transaction while SkaleUp records or receives the resulting payment status. A payment problem can therefore potentially involve the application, payment gateway, authentication process, network or service availability, or transaction state.

9. RAG Decision Rules

Rule 1 — IMD Meaning: IMD is the initial/login fee payment stage after the applicable Soft Approval stage. Rule 2 — IMD Amount: The amount is calculated internally by the system and is application-specific; do not assume a fixed amount. Rule 3 — Payment Facilitation: The BDE, Sales Agent, or Sales Owner handling the application facilitates

payment using the payment link. Rule 4 — Payment Process: Payment is made via the payment link and the configured gateway methods (Debit Card, UPI, Net Banking, Wallets where available). Rule 5 — Link vs. Payment: Receiving the payment link does not mean payment is complete; successful processing and recorded status are required. Rule 6 — OTP: OTP is a payment-authentication step, not final loan approval. Rule 7 — Proceeding: The application can proceed after successful payment confirmation and completion status (e.g., status COMPLETED). Rule 8 — Failed/Pending Payment: If payment is failed, pending, or showing an error, do not describe IMD as completed; treat it as a payment-processing or system-status issue.

RAG Retrieval Keywords: Initial Money Deposit, IMD, Login Fee, Payment Link, Payment Gateway, Easebuzz, Debit Card, UPI, Net Banking, Wallets, OTP, Transaction ID, UTR Reference Number, COMPLETED, Principal Fee, CGST, SGST.

Key Context

IMD is responsible for collecting the login/initial fee before the application can move to Income Verification (IV). The amount is system-calculated per application, and successful, recorded payment — not merely link generation — is the condition for completion.

Stage 7 — Income Verification (IV)

Purpose

Income Verification (IV) is a stage in the GMSS loan application journey used to verify the banking and financial information of applicants and Co-Aplicants whose income is being considered for the loan assessment. The stage follows Initial Money Deposit (IMD).

The relevant journey sequence documented for this stage is: Initial Money Deposit (IMD) → Income Verification (IV) → Reference Details → Collateral Details (if applicable) → Pre-Login Documents.

1. Applicability of Income Verification (IV)

Income Verification (IV) is applicable to financial Applicants and financial Co-Aplicants. A person is considered financially relevant for this stage when their income is being considered in the loan application and "Has Income?" is selected as "Yes" in Quick Data Entry (QDE).

Therefore: Applicant + Has Income = Yes → Income Verification (IV) applicable. Co-Aplicant + Has Income = Yes → Income Verification (IV) applicable. Has Income = No → income is not considered for that person through this income-verification process.

RAG rule: Use the Has Income? selection from Quick Data Entry when determining whether Income Verification (IV) applies to a particular Applicant or Co-Aplicant. IV is not restricted only to the Main Applicant.

2. Purpose of Income Verification (IV)

The purpose of Income Verification (IV) is to obtain and verify the applicant's banking/financial information relevant to the income and financial assessment of the loan application. The process involves providing banking details and obtaining the required banking statement/data through one of the available verification methods. The stage should not be described merely as uploading a bank statement, since it provides multiple methods through which banking information can be accessed or submitted.

3. Banking Verification

In the SkaleUp application context, Banking, Bank Verification, and Banking Verification all refer to the Income Verification (IV) stage; they are not separate stages. Within IV, the system displays a Banking Verification process that captures the following:

Applicant Name — identifies the applicant for whom banking verification is being performed; mandatory. Bank Name — identifies the bank account from which banking information is to be obtained; mandatory; selected from available options. Type of Account — identifies the type of bank account being verified; mandatory (example shown: Savings). Account Holding — identifies whether the account is held individually or jointly; mandatory; options are Single or Joint. Banking Statement Period — captured through Date From and Date To, both mandatory. The screen displays the instruction: "Kindly ensure the Banking period is as per the policy for an eligible Product to be mapped." The banking statement period should therefore be selected according to the applicable policy for the eligible product.

RAG rule: Do not assume a fixed number of months for the banking period unless a specific product policy or additional source document defines it.

4. Banking Verification Methods

After providing the required banking information, the applicant can access or submit banking data using one of four available methods:

Account Aggregator — displayed as the Recommended method; described as a simple and secure way to access and share financial data. The applicant's mobile number needs to be linked with the GSTIN account, and the applicant selects the bank account to access, then proceeds using the Proceed option. Net Banking — described as a secure approach where credentials are not stored and provides instant verification without documentation; the applicant proceeds with the Proceed With Net Banking option. E-Statement — the applicant downloads the required bank statements and uploads them manually, using the Proceed option under E-Statement. Scanned Statement — the applicant provides the bank statement by uploading it manually, using the Upload Now option.

RAG rule: Do not claim that username and password are always required for every IV method — the requirement depends on the selected method. If asked "Does the applicant have to enter bank username and password?", the correct response is: not necessarily; Net Banking may involve bank authentication, while Account Aggregator, E-Statement, and Scanned Statement provide other methods of accessing or submitting the required banking information.

5. Stage Sequence

Income Verification (IV) follows Initial Money Deposit (IMD). After Income Verification (IV), the application proceeds to Reference Details. After Reference Details, Collateral Details may be applicable depending on the application/product. After the applicable Collateral Details stage, the application proceeds to Pre-Login Documents.

Sequence: Initial Money Deposit (IMD) → Income Verification (IV) → Reference Details → Collateral Details (if applicable) → Pre-Login Documents.

Note: Reference Details is applicable to all applicant types, while Collateral Details is applicable only where required by the application/product.

6. RAG Decision Rules

Rule 1 — Sequence: Income Verification (IV) follows Initial Money Deposit (IMD). Rule 2 — Applicability: IV is performed for financial Applicants and financial Co-Applicants whose income is considered, per Has Income? = Yes in QDE. Rule 3 — Scope: IV is not limited to the Main Applicant. Rule 4 — Banking Verification fields: Applicant Name, Bank Name, Type of Account, Account Holding, Banking Statement Period (Date From/Date To). Rule 5 — Banking period: must be selected per the applicable product policy; do not state a fixed period unless specified. Rule 6 — Four verification methods: Account Aggregator (Recommended), Net Banking, E-Statement, Scanned Statement. Do not invent additional methods. Rule 7 — Authentication: The applicant does not necessarily need username/password, since multiple methods exist. Rule 8 — Next stages: Reference Details, then Collateral Details

(if applicable), then Pre-Login Documents.

RAG Retrieval Keywords: Income Verification, IV, Income Verification Group, Banking Verification, Bank Verification, Banking Details, Bank Statement Verification, Financial Verification, Income Proof, Banking Period, Account Aggregator, AA, Net Banking, E-Statement, Scanned Statement, Has Income.

Key Context

Income Verification (IV) Group is the terminology shown in the application tracker, while Banking Verification is the terminology shown on the banking verification screen itself; both refer to the same stage.

Stage 8 — Shareholding Pattern (Conditional)

Purpose

Shareholding Pattern is a stage in the GMSS loan application journey used to capture the ownership/shareholding details of the Main Applicant when the Main Applicant is a Company or Firm. The stage appears after the Income Verification (IV) Group stage and before Pending Documents For Login in the application tracker.

Applicability: This stage is applicable only when the Main Applicant is classified as a Company or Firm. It is not applicable to an Individual or Trust applicant. Company Main Applicant → Shareholding Pattern applicable. Firm Main Applicant → Shareholding Pattern applicable. Individual Main Applicant → Shareholding Pattern not applicable. Trust Main Applicant → Shareholding Pattern not applicable.

RAG rule: Determine the Main Applicant type before explaining or asking for Shareholding Pattern information. If a user asks why Shareholding Pattern is not appearing, first check whether the Main Applicant is an Individual, Company, Firm, or Trust.

1. Purpose and 51% Shareholding Requirement

The purpose of this stage is to capture the details of the shareholders who collectively represent the required 51% shareholding for file login. The screen explicitly displays the instruction: "Shareholding Percentage should be 51% for file login."

The application does not restrict the number or frequency of shareholders that can be added. Multiple shareholders can be entered as required, so the required 51% may be represented through one shareholder or multiple shareholders depending on actual ownership structure. For example, if three shareholders hold 17%, 17%, and 18%, their combined shareholding is 52%. The system displays each shareholder separately along with their individual shareholding percentage.

RAG rule: The shareholder count is not fixed; do not assume a fixed number of shareholders.

2. Add / Edit / Delete Shareholder

The ADD SHAREHOLDER action allows the user to add a shareholder to the Shareholding Pattern. Each shareholder is captured as an individual record. The screen provides the ability to add, view, edit, and delete shareholder records. The shareholder list displays the shareholder's Name, Applicant status, Designation, and Shareholding Percentage.

When shareholders are added or removed, the overall shareholding information should continue to satisfy the required 51% shareholding for file login.

3. Shareholder Fields (Add Shareholder Form)

Name — mandatory; the shareholder's name. Designation — mandatory dropdown; exact available values are not defined in the supplied source and should not be assumed. Shareholding % — mandatory; the percentage of ownership held by that shareholder, captured separately for each shareholder. Is Co-Applicant — mandatory Yes/No field specifying whether the shareholder is also a Co-Applicant. A shareholder does not have to be a Co-Applicant; selecting No is valid. Mobile Number — mandatory; no additional validation rule (e.g., format) is specified in the supplied source. Is Mobile Number Linked to Aadhaar — mandatory Yes/No field; the answer is not assumed to always be Yes. KYC Required — the Add Shareholder screen displays "KYC Required: No" for this flow. This should not be converted into a general KYC rule for other stages or applicant types. Upload Document — mandatory; the exact document type is not specified in the supplied material and should not be invented. If asked which document to upload, the correct response is that document upload is confirmed mandatory but the exact type is not defined in the supplied source.

4. Shareholder vs. Co-Applicant

A shareholder and a Co-Applicant are not the same concept. A shareholder is captured to represent the ownership/shareholding structure of the Company or Firm. A Co-Applicant is an applicant associated with the loan application. The form separately asks "Is Co-Applicant?" so a shareholder can be either Shareholder + Co-Applicant, or Shareholder + Not a Co-Applicant.

RAG rule: Do not assume that being a shareholder automatically makes the person a Co-Applicant.

5. RAG Decision Rules

Rule 1 — First determine the Main Applicant type. Rule 2 — If Company or Firm, Shareholding Pattern is applicable. Rule 3 — If Individual or Trust, Shareholding Pattern is not applicable. Rule 4 — No fixed restriction on number of shareholders. Rule 5 — Purpose is to capture shareholders representing the required 51% shareholding for file login. Rule 6 — Each shareholder is a separate record. Rule 7 — A shareholder does not have to be a Co-Applicant; Is Co-Applicant is captured separately. Rule 8 — Mandatory fields: Name, Designation, Shareholding %, Is Co-Applicant, Mobile Number, Is Mobile Number Linked to Aadhaar, Upload Document. Rule 9 — KYC Required is displayed as No in the supplied screen. Rule 10 — Exact Designation options and exact upload document type are not specified; do not invent them. Rule 11 — Stage position: after Income Verification (IV) Group and before Pending Documents For Login.

RAG Retrieval Keywords: Shareholding Pattern, Shareholding, Shareholder, Shareholding %, Shareholding Percentage, Ownership Pattern, Ownership Details, Add Shareholder, 51% shareholding.

Note: SBN (Sourcing Business Name) is unrelated to Shareholding Pattern and should not be mapped to this stage.

Stage 9 — Collateral Details (If Applicable)

Applicability

Collateral Details is a stage referenced in the GMSS loan journey as applicable only where required by the application/product — for example, in connection with secured-loan assessments. It is positioned after Shareholding Pattern (where Shareholding Pattern is applicable) and, per the Reference Details documentation, before Reference Details; the Income Verification (IV) documentation instead places Collateral Details after Reference Details. Both orderings appear in the supplied source material.

RAG rule: The supplied process documentation does not provide field-level detail (specific fields, document requirements, or validation rules) for the Collateral Details stage itself, and does not conclusively resolve whether it precedes or follows Reference Details. The chatbot should not invent field names, requirements, or a single definitive position for this stage beyond what is stated here, and should flag the sequencing ambiguity if a user asks for the precise order of Collateral Details relative to Reference Details.

RAG Retrieval Keywords: Collateral Details, Collateral, Secured Loan collateral.

Stage 10 — Reference Details

Purpose

Reference Details is a mandatory stage in the GMSS loan application journey, applicable to all types of applicants. The stage requires the applicant to provide two reference points, where each reference point represents a person who can be contacted if the loan borrower/applicant or Co-Applicant becomes a defaulter.

Position in Journey: Per the Reference Details documentation, Reference Details follows the Collateral Details stage: Shareholding Pattern → Collateral Details → Reference Details → Pending Documents for Login. (See the note under Stage 9 regarding a differing ordering found elsewhere in the source material.) Reference Details is applicable to all applicant types, irrespective of whether Shareholding Pattern was applicable.

The purpose of collecting references is to provide the sales team with additional contact points associated with the applicant. If the borrower/applicant or Co-Applicant defaults on the loan, these reference persons may be contacted by the sales team. Reference Details is therefore a contact/reference information stage and should not be treated as a Co-Applicant or guarantor-creation stage.

1. Applicability

Reference Details is applicable to all applicant types and is not restricted based on whether the Main Applicant is Individual, Company, Firm, or Trust. It can also be relevant where the application contains a Co-Applicant.

RAG rule: Do not ask the user to determine applicant type before explaining Reference Details, since this stage is applicable across applicant types.

2. Number of References Required

Two references are compulsory: Reference 1 → Mandatory, Reference 2 → Mandatory. A single reference is not sufficient to satisfy the requirement.

RAG rule: If asked "How many references are required?", the correct response is: two references are compulsory for the Reference Details stage. Do not state that one reference is sufficient, or that more than two are mandatory.

3. Who Can Be Added as a Reference?

A reference can be a person known to the applicant, such as a neighbour, friend, colleague, or relative — someone who can potentially be contacted if the applicant/borrower or Co-Applicant becomes a defaulter. A reference is therefore a contact person for reference purposes and should not automatically be interpreted as a Co-Applicant, Guarantor, Borrower, or Shareholder. The relationship between the applicant and the reference is captured through the Relation field.

4. Reference Details Captured (per reference)

First Name — mandatory. Middle Name — provided where applicable. Surname — mandatory. Address — the reference person's address. Pincode — the pincode of that address. Relation — identifies the relationship between applicant and reference (examples: Neighbour, Friend, Colleague, Relative). Exact system dropdown values should be taken from the configured application screen; do not invent additional values. Contact — the reference person's contact information, so they can be contacted when required.

5. Reference Validation

Reference details are validated manually from the Sales end. There is no system-based validation or automated system update associated with reference validation per the supplied process. The system does not automatically confirm the validity of a reference merely because the reference details have been entered.

RAG rule: Distinguish between "reference details entered" and "Sales team manually validates the references"; do not describe this as automated system verification.

6. Reference vs. Co-Applicant / Guarantor

A Reference and a Co-Applicant are different concepts. A Co-Applicant is part of the loan application structure. A Reference is a person provided as a contact/reference point who may be contacted if the borrower/applicant or Co-Applicant becomes a defaulter. Reference $\neq$ Co-Applicant, and Reference $\neq$ Guarantor, unless a separate business rule specifically establishes such a relationship.

RAG rule: Do not tell users that adding a reference makes that person responsible for the loan, or financially responsible for repayment.

7. RAG Decision Rules

Rule 1 — Applicable to all applicant types. Rule 2 — Two references are compulsory. Rule 3 — A reference can be a neighbour, friend, colleague, or relative. Rule 4 — Required reference information: First Name, Middle Name, Surname, Address, Pincode, Relation, Contact. Rule 5 — Purpose: additional contact points if the borrower/applicant or Co-Applicant defaults. Rule 6 — Validation is manual, from the Sales end — not automated. Rule 7 — A reference should not be described as a Co-Applicant or guarantor unless a separate documented rule states so. Rule 8 — One reference is not sufficient; two are compulsory. Rule 9 — Do not claim the system automatically validates whether a reference is genuine, reachable, or related to the applicant. Rule 10 — Do not claim the reference is financially responsible for the loan.

RAG Retrieval Keywords: Reference Details, Reference, References, Reference Point, Reference Person, Contact Reference, Sales Reference, Reference Validation, Two References, 2 References.

Stage 11 — Pending Document for Login

Purpose

Pending Document for Login is the pre-login document verification stage within the pre-login sales journey, and is the final stage of the pre-login journey. It is preceded by the Reference Details stage. Once this stage is completed, the case is considered ready to move out of the pre-login sales journey and into the login and underwriting workflow.

This stage ensures that no application is allowed to proceed to login without first collecting and verifying the complete set of mandatory documents required for the applicant and, where applicable, the co-applicant. A case cannot move forward to login while any mandatory document required at this stage remains missing, rejected, or unverified. This stage collects documents for applicant identity verification, address verification, ownership validation, financial assessment, and loan application processing. The BDE selects a document category, chooses the document type within that category, and uploads the corresponding document on behalf of the applicant or co-applicant.

1. Document Collection Structure

Documents are organized into categories, each representing a purpose the document set must satisfy (proving address, identity, ownership, capturing the application itself, assessing financial capability, or providing a bureau credit report). Within each category, the user selects the specific document type before uploading. Documents are further separated by party: the primary Applicant, an Individual Co-Applicant, or an Entity Co-Applicant — each with its own mandatory and optional document requirements.

2. Applicant Documents

The Applicant must upload documents across six mandatory categories — POA-OVD, POI, Ownership Proof, Application, Financials, and Bureau — plus any relevant optional documents.

2.1 POA-OVD (Proof of Address – Officially Valid Document)

Verifies the applicant's residential address using an Officially Valid Document (a KYC term for a document issued by a government or recognized authority accepted as proof of address). Accepted types: Aadhaar Card, Passport, Letter Issued by NPR (National Population Register), Voter ID Card (EPIC), Job Card issued under NREGA/MGNREGA, Driving License, Sale Deed of Property, Rent Agreement.

2.2 POI (Proof of Identity)

Verifies the applicant's identity independently of address. Accepted types: PAN Card (Permanent Account Number, issued by the Income Tax Department), Form 60 (a declaration form used by individuals without a PAN card for transactions that would otherwise require one).

2.3 Ownership Proof

Establishes that the applicant owns the residential property or collateral property referred to in the application. Accepted types: Index II (Sub-Registrar's office extract, notably used in states such as Maharashtra), Property Sale Deed, Property Tax Receipt, Municipal Tax Receipt, Utility Bill.

2.4 Application

Captures the formal loan application. Document type: Application Form — filled and signed by the applicant; this is the specific document later sent for virtual signature by the authorized signatory (see Section 5).

2.5 Financials

Assesses income and repayment capability. Document type: Salary Slip — details gross pay, deductions, and net pay for a given period.

2.6 Bureau

Verifies credit history and score. Document type: Consumer Bureau Report — a system-generated report from a credit bureau; unlike other categories, this is not manually uploaded by the user, but forms part of the mandatory document set.

2.7 Optional Documents (Applicant)

Age Proof, Relationship Proof, Declarations, Affidavits, Deemed OVD – Relative, Deemed OVD – Owner, Deemed OVD, Signature Verification, Self Employment, Educational Qualification, Signing Kit, Application (additional), Financials (additional, e.g., bank statements/ITRs), Practice Registration Certificate.

3. Co-Applicant Documents

3.1 Individual Co-Applicant

Mandatory documents largely mirror the Applicant's, using the same document types as above, except that Financials (Salary Slip) is explicitly NOT required for the individual co-applicant. Mandatory categories for an Individual Co-Applicant: POA-OVD, POI, Ownership Proof, Application, and Bureau.

3.2 Entity Co-Applicant

An entity co-applicant (company, partnership firm, or other registered business entity) has different document categories, since an entity does not have a personal identity or residence.

3.2.1 POA (Proof of Address) for Entity

Verifies the entity's registered address. Accepted types: Form INC-22 (Companies) — statutory form filed with the Registrar of Companies confirming registered office address; Telephone Bill; Postpaid Mobile Bill; Bank Statement; Utility Bill; Municipal Tax Receipt; Shop & Establishment Certificate; GST Registration Certificate; Registered Rent Agreement; Sale Deed of Property; Title Document of Shop; Index II; Rent Agreement (unregistered).

3.2.2 POI (Proof of Identity) for Entity

Document type: PAN Card — the entity's Permanent Account Number issued by the Income Tax Department, uniquely identifying the entity for tax/financial purposes.

3.2.3 Ownership Proof for Entity

Accepted types: Utility Bill, Property Sale Deed, Property Tax Receipt, Municipal Tax Receipt, Index II.

3.2.4 Optional Documents (Entity Co-Applicant)

Ownership Proof (additional), Bureau (credit bureau report for the entity, where applicable), Financials (additional financial documents, e.g., business financial statements).

4. Actions Available on Each Document Row

Upload — attaches the selected document file against the chosen category/type; generally the first action performed on a row. Download — retrieves a previously uploaded document for viewing/verification; available once a document has been uploaded. Replace/Re-upload — updates an existing document with a new version, used when the original was incorrect, illegible, expired, or otherwise needed correction. Delete — removes an uploaded document from a row; subject to permissions and validation rules, so it may not always be available depending on document state, case stage, or user role.

5. Post-Upload Verification and Virtual Signing of the Application Form

Uploading documents does not automatically conclude this stage. A verification and signing step follows, specifically for the Application Form (Section 2.4).

5.1 BDE-Initiated Verification

After document upload, the BDE initiates a verification step for the Application Form. This is completed virtually through a dedicated document signing and verification gateway integrated into the application flow — a purpose-built digital signing/verification platform that presents a document to a designated signatory for review and electronic signature, records the signing event, and returns the signed document in verifiable form.

5.2 Authorized Signatory Flow

The authorized signatory for the case receives a link opening a document viewing interface, where they can view the Application Form along with the applicant's uploaded documents for review before signing. Once satisfied, they sign the Application Form virtually through the same interface. It is the Application Form specifically — not the full set of applicant/co-applicant documents — that is virtually signed at this step. The other uploaded documents (POA-OVD, POI, Ownership Proof, Financials, Bureau report) are presented for review/verification within the same interface, but

the signing action applies to the Application Form only.

5.3 Purpose of the Verification and Signing Step

This step ensures the Application Form is not just collected as a document but independently reviewed and authorized by a designated signatory before the case proceeds — tying the signing action to a documented review of the underlying evidence rather than treating the signature as a standalone formality. Only once this step is completed does Pending Document for Login move toward completion.

6. Stage Completion and Transition to Login

The Pending Document for Login stage is considered complete when:

- all mandatory documents for the Applicant (POA-OVD, POI, Ownership Proof, Application, Financials, Bureau) have been uploaded;
- all mandatory documents for any Individual Co-Applicant (POA-OVD, POI, Ownership Proof, Application, Bureau) have been uploaded;
- all mandatory documents for any Entity Co-Applicant (POA, POI, Ownership Proof) have been uploaded; and
- the Application Form has been reviewed and virtually signed by the authorized signatory following the BDE-initiated verification step.

Once these conditions are satisfied, the case exits the Pending Document for Login stage — the final stage of the pre-login sales journey — and proceeds into the login stage, entering underwriting and further processing outside the scope of the pre-login journey.

RAG Retrieval Keywords: Pending Document for Login, Pre-Login Documents, POA-OVD, POI, Ownership Proof, Application Form, Financials, Salary Slip, Bureau, Consumer Bureau Report, Individual Co-Applicant documents, Entity Co-Applicant documents, virtual signing, authorized signatory.

Cross-Stage Note for Stages 6–11

As with Stages 1–5, verification and system-dependency behaviour (e.g., external API/service failures such as "No Credits", "Service Down", "Receiving Empty Documents from System") applies across these stages wherever a verification step is involved (e.g., document verification within Pending Document for Login, bureau checks feeding into commercial/CIBIL data referenced earlier in the journey). The chatbot should apply the same safeguard: a verification failure does not automatically mean the applicant's document or information is incorrect — it may equally reflect an external/system-side issue — and this should not be converted into an automatic rejection rule.

Cross-Stage RAG Rules — Verification, Eligibility, Applicant Structure & Timeline

1. External Verification and Third-Party Dependencies

Various stages of the loan application require verification of applicant information and documents. Examples include: Aadhaar verification, PAN verification, Bureau/Credit Score checks, Document verification, Other identity, legal, financial or compliance-related verifications. These verification activities may depend on: External APIs, Third-party verification services, External data providers, UGRO-integrated verification systems, Backend services. Therefore, a verification failure does not necessarily mean that the applicant's document or information is incorrect.

External Service Dependency This diagram shows that when the UGRO Application needs to verify something, it sends a Verification Request to an External API or Third-Party Service, which returns a Verification Response back to the UGRO Application. If the external service is unavailable or returns an unexpected response, verification may fail even when the applicant has provided valid information.

2. Verification Service Failure

Verification services may occasionally experience technical issues. Possible causes include: External service/server downtime, API failure, Service temporarily unavailable, Insufficient credits/quota with the external service, Empty response/document received from the verification system, Communication failure between UGRO and the external service, Other backend/integration issues. Examples of error/status messages that may appear include: No Credits, Service Down, Receiving Empty Documents from System. These messages should be treated as potential system/integration/service-side issues, rather than immediately assuming that the applicant's document is invalid.

3. Verification Failure — RAG Response Rule

If the user asks: "PAN card verification is not working." or "Aadhaar card cannot be verified." or "Document verification is failing." or "Why is my bureau check not working?" The chatbot should consider both applicant-side and system-side possibilities.

Recommended reasoning This diagram shows that when a Verification Failure occurs, there are two possible causes to consider: the document/information itself might be incorrect, or there might be an External/System Issue involving the API, a third party, or the server — such as Service Down, No Credits, an Empty Response, or an Integration Error.

RAG response principle: A verification failure may be caused by an issue with the submitted information/document or by an external verification service, API, or server-side dependency. If the system shows errors such as "No Credits", "Service Down", or "Receiving Empty Documents from System", the issue may be related to the verification service or backend integration. The chatbot should not automatically tell the Business Development Executive (BDE) to re-upload a valid document when the error indicates an external service failure.

4. Application Movement Dependency

Some verification results are required before the application can move to the next stage. Therefore: This diagram shows that after a Required Verification, if it is successful the Application can proceed; if it is not successful, the Application may be blocked and remain at its current stage. If a mandatory verification cannot be completed, the application may remain at the current stage and the BDE may be unable to proceed. RAG Rule: If a mandatory verification is unsuccessful or unavailable, the application may not be able to proceed to the next stage until the required verification is completed or the underlying service issue is resolved.

5. Credit Score / Bureau Information as a Major Loan Consideration

The credit/bureau score or rank is an important factor considered in loan assessment. The applicable credit indicator depends on the applicant type. Examples: Individual → applicable individual credit score/bureau information; Entity → applicable commercial bureau information such as CIBIL (Credit Information Bureau India Limited) Commercial/CIBIL MSME Rank (CMR) The credit profile is considered along with other loan eligibility factors.

Other Factors The assessment may also consider information such as: Salary / monthly income, Existing financial obligations, Co-Applicants, Business turnover, Business vintage, Loan amount, Property information, Repayment obligations, Other applicable eligibility parameters

RAG Context This diagram shows that the Overall Loan Assessment is built from multiple contributing factors combined together: the Credit/Bureau Profile (a major consideration), Income/Salary, Co-Applicants, Turnover, Property/Loan Details, and Other Eligibility Factors. Important RAG Rule: Credit/bureau information is an important consideration in the loan assessment, but it should not be represented as the only factor determining approval. Other applicant, financial, business, property and loan-related factors may also be considered.

6. Co-Applicant Consideration

As per the business guidance provided for this RAG knowledge base: A higher number of suitable Co-Applicants may provide better consideration during the loan approval assessment. The presence of Co-Applicants can provide additional applicant information and financial context for the assessment.

Female Co-Applicant The provided business rule also states: Having at least one female Co-Applicant is considered favourable for better chances of approval. Therefore, if the user asks: "How many Co-Applicants should I add?" or "Is having more Co-Applicants better?" or "Should I add a female Co-Applicant?" the chatbot should respond according to the supplied business rule. RAG Response: As per the configured loan-process guidance, having more suitable Co-Applicants can improve consideration during the approval assessment. Having at least one female Co-Applicant is also considered favourable for better chances of approval. However, Co-Applicant count alone does not guarantee approval; the overall credit profile, income, turnover and other eligibility factors are also considered.

Applicant Structure This diagram shows that the Main Applicant plus any Co-Applicant(s) together provide additional financial/applicant information, which feeds into the Overall Loan Assessment. Important: The chatbot should describe this as a business-process consideration, not as a guaranteed approval rule.

7. Time Required for Loan Application

If the user asks: "How much time does the loan application take?" or "How long will it take to complete the process?" the response should be applicant-dependent. The time required can vary depending on: Applicant type, Number of applicants/Co-Applicants, Availability of required information, Availability of documents, Verification results, External API/third-party service availability, Corrections required during data entry, System/service issues, Other application-specific requirements

Sales Journey Timeline For the loan sales journey up to the pre-login stage, the approximate time is: Around 1 hour or more, when all suitable information and documents are readily available to the BDE/agent/Business Development Executive (BDE).

RAG Rule This diagram shows that when complete information and documents are readily available, data entry is faster, and the overall pre-login sales journey takes approximately 1 hour or more. If information/documents are

incomplete or verification services experience problems: This diagram shows that if information or documents are missing, or if there is a verification/API issue, additional time is needed and the process may exceed the approximate 1-hour timeline. RAG Response: The time required depends on the applicant and completeness of the information/documents. Generally, the loan sales journey up to the pre-login stage can take approximately 1 hour or more when the required information is readily available to the BDE/agent/Business Development Executive (BDE). Missing information, document issues, applicant complexity, or external verification/service issues can increase the processing time.

8. Master RAG Decision Rules

These rules should be available across the entire knowledge base. Verification: If PAN/Aadhaar/bureau/document verification fails, consider both applicant/document issues and external API, third-party, server or integration issues. Error Messages: "No Credits", "Service Down", and "Receiving Empty Documents from System" may indicate an external verification or backend service problem. Stage Movement: Mandatory verification failure may prevent the application from moving to the next stage. Credit: Credit/bureau information is a major consideration in loan assessment, but approval is based on the overall applicable eligibility factors. Other Eligibility Factors: Salary/income, Co-Applicants, turnover, property information, existing obligations and other loan-specific factors may also contribute to assessment. Co-Applicants: As per the supplied business guidance, more suitable Co-Applicants can improve consideration, and having at least one female Co-Applicant is considered favourable for better chances of approval. This is not an approval guarantee. Timeline: The pre-login sales journey generally takes approximately 1 hour or more when suitable information and documents are available. Applicant complexity, missing information, verification and external-service issues can increase the time.

Most Important RAG Safeguard The chatbot should not turn any individual factor into a guaranteed approval/rejection rule. For example: This block lists five explicit non-equivalences the chatbot must respect: a CMR-8 rating does not automatically mean rejection; having more Co-Applicants does not guarantee approval; having a female Co-Applicant does not guarantee approval; a failed PAN verification does not automatically mean the PAN is invalid; and a "Service Down" error does not mean the applicant's document is wrong. This distinction will be particularly important for your RAG chatbot because otherwise it may give BDEs overly confident answers that aren't actually supported by the application workflow.

Cross-Stage RAG — Common User Queries & Response Rules

1. PAN Verification Is Not Working

User: "PAN verification is not working." Response: PAN verification may fail because of an issue with the PAN details/document, or because the external PAN verification service/API is unavailable or returning an unexpected response. Check the entered PAN details and document first. If the details are correct and the system shows an error such as Service Down, No Credits, or Empty Response, the issue may be related to the external verification service or backend integration. If PAN verification is mandatory at the current stage, the application may not proceed until verification is completed.

2. Aadhaar Verification Failed

User: "Aadhaar cannot be verified." Response: Aadhaar verification can fail because of incorrect/inconsistent information or because the external verification service/API is unavailable. If the submitted information is correct, check whether the system is showing a service-side error. A mandatory verification failure may prevent the application from moving forward until verification is successfully completed.

3. Document Verification Is Not Working

User: "Document verification is failing." Response: Document verification may fail because of the document itself, incorrect/incomplete information, or an external verification/API/service issue. If the system shows Service Down, No Credits, or an empty document response, it may indicate a backend or third-party verification problem. Check the document and retry when the service is available.

4. What Does "No Credits" Mean?

Response: No Credits may indicate that the external verification service has insufficient available credits/quota to process the verification request. This can be a service-side issue rather than an issue with the applicant's document. If the verification is mandatory, the application may remain blocked until the service becomes available or the issue is resolved.

5. What Does "Service Down" Mean?

Response: Service Down generally indicates that the external verification service or API required for the operation is currently unavailable. It does not necessarily mean that the applicant's document or information is incorrect. If the verification is mandatory, the application may not be able to proceed until the service becomes available.

6. What Does "Receiving Empty Documents from System" Mean?

Response: This may indicate that the application requested document information from an external/backend service but received an empty or incomplete response. It can therefore be a system/integration issue rather than proof that the applicant's document is invalid.

7. Why Can't I Move to the Next Stage?

Response: The application may be unable to proceed when a required field, document, validation or mandatory verification has not been successfully completed. External verification failures can also prevent stage movement. Check the current screen for the specific validation/error message before determining the cause.

8. Why Is Proceed Disabled?

Response: A disabled Proceed button generally indicates that one or more conditions required to continue have not been satisfied. Check for incomplete mandatory fields, failed validations, pending documents, pending consent or unsuccessful mandatory verification. The exact condition depends on the current stage. RAG rule: Do not assume a specific reason unless the stage documentation confirms it.

9. Why Is Calculate Eligibility Disabled?

Response: Calculate Eligibility may remain disabled until the required Soft Approval inputs, validations and applicable documents have been completed. Check mandatory fields, income validation, applicable applicant-type conditions and required documents. For Soft Approval specifically:

- Home Loan (HL): Soft Approval is not applicable.
- Individual non-HL: Business information is not asked.
- Entity non-HL: Business information is applicable.

10. What If Net Monthly Income Is Too Low?

Response: Net Monthly Income is calculated as Monthly Gross Income – Monthly Obligations. If the resulting amount does not satisfy the configured minimum requirement, the system displays a validation message and the application may not proceed until the requirement is satisfied. Do not provide a numerical minimum unless it is explicitly available in the configured process/documentation.

11. Why Is Business Vintage Required?

Response: Business Vintage is part of the Soft Approval information for an Entity applicant in the applicable non-Home-Loan flow. The supplied process specifies a minimum business vintage of 2 years. For an Individual applicant, business vintage is not asked.

12. Why Is Business Vintage Not Showing?

Response: Check the applicant type and loan type. Business information is not asked for an Individual applicant. It is also not part of the Soft Approval flow for a Home Loan (HL).

13. What Should I Enter for Business Address Stability If It Is Less Than One Year?

Response: Enter 0 in Years at Current Address when the business has operated at its current address for less than one year.

14. Why Is Soft Approval Not Showing?

Response: First check whether the application is for a Home Loan (HL). Soft Approval is not asked for Home Loan applicants. For applicable non-HL applications, check the applicant type and current stage.

15. Which Score Is Used for an Entity?

Response: For an Entity/Business applicant, the Bureau Summary can display Commercial Bureau / CIBIL (Credit Information Bureau India Limited) Commercial information, including the CIBIL MSME Rank (CMR). CMR is different from the individual CIBIL score.

16. Is CMR-8 Good or Bad?

Response: CMR is ranked from CMR-1 to CMR-10, where lower ranks represent stronger/lower-risk commercial credit profiles and higher ranks represent weaker/higher-risk profiles. CMR-8 is therefore in the higher-risk range. However, CMR alone does not determine loan approval or rejection.

17. Does a Good Credit Score Guarantee Approval?

Response: No. Credit/bureau information is an important consideration, but loan assessment can also consider income/salary, existing obligations, Co-Applicants, turnover, property information and other applicable eligibility factors.

18. Does a Bad Credit Score Automatically Reject the Application?

Response: Not necessarily. A weaker credit/bureau profile can negatively affect the assessment, but the final assessment depends on the applicable overall eligibility criteria and other applicant, financial, property and loan-related information.

19. Should I Add More Co-Applicants?

Response: As per the provided business guidance, having more suitable Co-Applicants can provide better consideration during the loan approval assessment. Having at least one female Co-Applicant is also considered favourable for better chances of approval. However, the number of Co-Applicants does not guarantee approval; the overall credit profile and other eligibility factors are also considered.

20. Is a Female Co-Applicant Required?

Response: The provided business guidance considers having at least one female Co-Applicant favourable for better chances of approval. It should not be represented as a mandatory requirement or a guarantee of approval unless the official application rules specifically state so.

21. How Long Does the Loan Application Take?

Response: The time depends on the applicant, completeness of information/documents, number of applicants, verification requirements and availability of external services. Generally, the sales journey up to pre-login can take approximately 1 hour or more when suitable information is readily available to the BDE/agent/Business Development Executive (BDE). Missing information, document issues or service downtime can increase the time.

22. Why Is My Application Taking Longer Than One Hour?

Response: The approximate 1-hour timeline applies when the required information and documents are readily available. Processing can take longer because of incomplete information, additional applicants, document verification, bureau checks, corrections, mandatory validations or external API/third-party service issues.

23. Can a Server Problem Affect the Loan Application?

Response: Yes. Some verification and data-retrieval functions depend on external APIs, third-party services or backend systems. If those services are unavailable or return an error/empty response, a verification may fail and the application may be unable to proceed through a dependent stage.

24. Is the Applicant's Document Wrong if Verification Fails?

Response: Not necessarily. Verification failure can result from incorrect applicant information or document issues, but it can also result from external API, third-party, backend or server-side problems. Check the specific error message before concluding that the document is invalid.

25. Can I Continue if PAN/Aadhaar Verification Is Pending?

Response: It depends on whether that verification is mandatory for the current stage. If a mandatory verification is pending or unsuccessful, the application may not be able to move to the next stage until the verification is completed.

26. Why Is Bureau Check Not Completed?

Response: Check whether the required consent and OTP verification have been completed. After successful consent processing, the application proceeds toward the bureau check. Bureau processing can also depend on external bureau/API services, so a service-side issue may prevent completion. This diagram repeats the bureau-processing sequence: Consent leads to OTP Verification, which leads to the Bureau Check, which produces a Bureau Status and then the Bureau Information.

27. Why Is Consent Still Showing "Not Received"?

Response: Link Sent and Consent Received are separate statuses. A consent link can be sent while the consent status remains "Consent not received". The BDE should complete the consent process and OTP verification. If required, the consent link can be resent.

28. What If the Consent Link Doesn't Work?

Response: Check whether the consent link was successfully sent and whether the consent process has been completed. If consent is still not received, the available Re-Send Consent Link action can be used. If the link/service continues to fail, the issue may also be related to the underlying service or integration.

29. General RAG Troubleshooting Rule

For any system/verification problem, the chatbot should follow this order: This flowchart lays out the general troubleshooting order the chatbot should follow when a user reports a problem: first identify the current Stage, then the Applicant Type, then the exact Field or Verification involved, then check the displayed Error/Status and whether it is mandatory. Then determine the possible causes, which fall into either an Applicant/Input issue or an External/API/Server issue, and finally explain to the user whether the application can proceed. Never automatically assume: This final block lists six safeguard non-equivalences the chatbot must always respect: a failed verification does not mean the document is invalid; a "Service Down" status does not mean the applicant made an error; a "No Credits" status does not mean the applicant's data is bad; a low bureau score does not mean automatic rejection; having more Co-Applicants does not guarantee approval; and the approximate 1-hour timeline is not a guaranteed completion time.
