

## MASTER INSTRUCTION — UPDATE GRO MICRO SALES RAG KNOWLEDGE BASE

---

### 1. OVERALL LOAN JOURNEY WORKFLOW

The overall GRO Micro Sales loan application workflow should be represented conceptually as:

**Application Creation / Search → Loan Details → Quick Data Entry → Bureau Summary → Soft Approval → Initial Money Deposit (IMD) → Income Verification / Banking Verification → Shareholding Pattern (conditional) → Collateral Details (conditional) → Reference Details → Pending Documents for Login / Pre-Login Documents → Pre-Login / File Login**

The exact stage sequence may vary based on applicant type, loan amount, product, financial status, and collateral applicability.

The RAG model must understand that **not every stage is applicable to every application**.

The chatbot should therefore use the relevant conditions before answering whether a stage is applicable.

---

### 2. APPLICANT TYPES

The following applicant types must be recognized:

- **Individual**
- **Company**
- **Firm**
- **Trust**

The chatbot must understand that applicant type affects:

- Bureau type
- Bureau score applicability
- Shareholding Pattern applicability
- Home Loan applicability
- Financial status
- Income Verification
- Other stage conditions

Do not treat all applicant types identically.

---

### 3. FINANCIAL APPLICANT / INCOME CONSIDERATION

A key technical concept is **Financial Applicant**.

An applicant or Co-Applicant is considered **financial** based on the selection of the income consideration radio button in Quick Data Entry.

The field is:

**“Is income considered?”**

Options:

**Yes**

**No**

The chatbot must understand:

**Is income considered = Yes → Applicant/Co-Applicant is Financial**

**Is income considered = No → Applicant/Co-Applicant is Non-Financial for this process**

Use the term **Financial Applicant** or **Financial Co-Applicant** consistently.

Do not assume that a person is financial simply because they are an Applicant or Co-Applicant.

The financial/non-financial status is determined by the **“Is income considered?”** selection.

---

#### **4. MAIN APPLICANT FINANCIAL CONDITION**

The **Main Applicant should be financial**.

The chatbot should understand this as an application-level condition and should not assume that the Main Applicant can simply be treated as non-financial.

The relevant determination is made through:

**Quick Data Entry → Is income considered? → Yes/No**

---

#### **5. INCOME VERIFICATION / BANKING VERIFICATION**

**Income Verification** is also referred to in the UI/process as:

- Income Verification
- Income Verification Group
- Banking Verification
- Banking Verification Stage
- Banking
- Bank Verification

- Banking Details
- Bank Statement Verification

### **Critical terminology mapping**

If a user says:

“Banking”

in the context of the loan journey, interpret it as:

### **Income Verification / Banking Verification**

Do not treat “Banking” as an unrelated generic banking topic when the user is asking about the ScaleUp/GRO Micro Sales loan application.

For example:

“Banking pending hai”

should be interpreted as:

**Income Verification / Banking Verification is pending.**

---

## **6. INCOME VERIFICATION APPLICABILITY**

Income Verification is **conditional**.

It is performed only when:

**Loan Amount > ₹20 Lakhs**

AND the relevant Applicant/Co-Applicant is **Financial**, meaning:

**Is income considered = Yes**

Therefore, the RAG model should not state that Income Verification is performed for every loan application.

The chatbot should evaluate:

**Loan Amount → Is it greater than ₹20L?**

AND

**Applicant/Co-Applicant → Is income considered = Yes?**

before determining Income Verification applicability.

---

## **7. INCOME VERIFICATION PARTICIPANTS**

Income Verification / Banking Verification applies to **financial applicants whose income is considered**.

The relevant participant can include:

- Main Applicant
- Financial Co-Applicant

The chatbot must understand the distinction between:

**Applicant**

and

**Financial Applicant**

and between:

**Co-Applicant**

and

**Financial Co-Applicant**

The deciding factor is the “**Is income considered?**” radio selection.

---

## **8. INITIAL MONEY DEPOSIT — IMD**

**Initial Money Deposit** is abbreviated as:

**IMD**

Possible user terminology:

- IMD
- Initial Money Deposit
- Initial Deposit
- Money Deposit
- Initial Payment
- Deposit
- IMD Payment
- IMD Link
- Payment Link

The chatbot should understand these terms as potentially referring to the **Initial Money Deposit stage**, depending on context.

**IMD applicability**

IMD is applicable to cases **only when the business is Plant & Machinery based**.

Therefore:

**Plant & Machinery based business → IMD applicable**

**Non-Plant & Machinery based business → IMD not applicable**

Do not state that IMD is mandatory for every loan application without checking the Plant & Machinery condition.

---

## **9. SOFT APPROVAL**

**Soft Approval** is a compulsory stage for **all cases**.

The chatbot should understand:

**Soft Approval is compulsory for all applicable cases in the GRO Micro Sales process.**

Do not incorrectly state that Soft Approval is optional.

Where existing documentation contains a product-specific exception, retain the documented business rule only if it is still valid and explicitly confirmed.

---

## **10. BUREAU SUMMARY / BUREAU SCORE**

The following terminology should be treated as related:

- Bureau
- Bureau Summary
- Bureau Score
- Credit Bureau
- Credit Score
- CIBIL
- CIBIL Score
- Commercial Bureau
- Consumer Bureau
- Consumer Score
- Commercial Score

The **Bureau Summary stage calculates/obtains bureau scores for the applicants in the application** according to applicant type and applicable conditions.

---

## **11. INDIVIDUAL VS ENTITY BUREAU SCORE**

The chatbot must distinguish between **Individual** and **Entity** applicants.

### **Individual**

For an **Individual**, the applicable bureau score is the:

#### **Consumer Score**

Possible user terminology:

- Consumer score
- Consumer bureau
- CIBIL consumer score
- Individual bureau score
- Personal CIBIL
- Personal bureau

### **Entity**

For an **Entity**, the applicable bureau score is the:

#### **Commercial Score**

Possible user terminology:

- Commercial score
- Commercial bureau
- Entity bureau
- Business bureau
- Commercial CIBIL
- Business CIBIL
- Entity credit score

---

## **12. ENTITY CO-APPLICANT — ₹20L BUREAU CONDITION**

There is a specific bureau condition for an **Entity Co-Applicant**.

If:

**Loan Amount < ₹20 Lakhs**

then:

**Bureau Score is not calculated for the Entity Co-Applicant.**

This is an important exception.

The chatbot must not answer that every Entity Co-Applicant always receives a bureau score.

---

### **13. ENTITY MAIN APPLICANT — ₹20L BUREAU CONDITION**

For an **Entity Main Applicant**, the bureau score **is calculated even when the loan amount is less than ₹20 Lakhs**.

Therefore, the chatbot must distinguish:

**Entity Main Applicant**

**Loan Amount < ₹20L → Bureau Score is calculated**

**Entity Co-Applicant**

**Loan Amount < ₹20L → Bureau Score is not calculated**

This distinction is extremely important for RAG retrieval.

Do not generalize the ₹20L bureau condition to all entities.

---

### **14. BUREAU SCORE WORKFLOW LOGIC**

The RAG model should understand the following decision logic:

**Applicant Type → Individual / Entity**

Then:

**Individual → Consumer Score**

**Entity Main Applicant → Commercial Score, including for loan amounts below ₹20L**

**Entity Co-Applicant + Loan Amount < ₹20L → Bureau Score not calculated**

The Bureau Summary stage is responsible for the bureau information/score applicable to the relevant applicants.

---

### **15. REFERENCE DETAILS**

**Reference Details is compulsory for all applicant types.**

This means Reference Details is not restricted to:

- Individual
- Company
- Firm
- Trust

It applies to **all applicant types**.

Two references are compulsory.

A reference can be:

- Neighbour
- Friend
- Colleague
- Relative

The required reference information includes:

- First Name
- Middle Name
- Surname
- Address
- Pincode
- Relation
- Contact

### **Reference validation**

Reference validation is performed:

#### **Manually from the Sales end**

There is:

#### **No automated system validation / system update for reference validation**

The chatbot must not claim that the system automatically validates the references.

### **Purpose**

References may be contacted if the:

- Borrower / Applicant
- Co-Applicant

becomes a defaulter.

A reference should **not automatically be interpreted as a Co-Applicant or Guarantor**.

---

## **16. REFERENCE DETAILS STAGE POSITION**

Reference Details follows:

## Collateral Details

The relevant downstream sequence should be understood as:

**Income Verification → Reference Details → Collateral Details (if applicable) → Pre-Login Documents**

However, based on the application journey, Collateral Details may be applicable before Reference Details depending on the specific workflow representation.

The KB should preserve the confirmed business journey position documented in the source PDFs and the latest agreed process.

**Do not create contradictory sequences across PDFs.**

All PDFs must use one consistent stage sequence.

---

## 17. SHAREHOLDING PATTERN

Shareholding Pattern applies only when the **Main Applicant is:**

- Company
- Firm

It does not apply to:

- Individual
- Trust

There is no restriction on the number of shareholders that can be added.

The process is specifically interested in capturing shareholders representing the required **51% shareholding** for file login.

### Important

A shareholder **does not have to be a Co-Applicant**.

The system separately captures:

**Is Co-Applicant → Yes / No**

Therefore:

Shareholder ≠ necessarily Co-Applicant

The Shareholding Pattern screen includes shareholder information such as:

- Name
- Designation
- Shareholding %

- Is Co-Applicant
- Mobile Number
- Is Mobile Number Linked to Aadhaar
- Upload Document

KYC is displayed as **No** in the provided stage UI.

---

## 18. COLLATERAL PLEDGING FREQUENCY

Collateral pledging frequency is **not restricted to a specific number**.

The process does not define a fixed maximum or fixed frequency.

The business understanding is:

**More collateral is better.**

The chatbot must not state an arbitrary maximum number of collateral properties/assets.

If a user asks:

“How many collateral can I pledge?”

The model should not invent a number.

---

## 19. HOME LOAN — HL

**HL = Home Loan**

The chatbot must recognize:

- HL
- Home Loan
- Home Loan product
- Home Loan case

as related terminology.

**HL applicant condition**

HL is applicable only when the **Main Applicant is an Individual**.

The PAN card applicant category for the Individual is:

**PAN fourth character = P**

Therefore:

**PAN fourth character P → Individual / Proprietor category**

For the specific HL rule provided here:

**HL → Individual Main Applicant → PAN category P**

The chatbot should not state that Company, Firm, or Trust Main Applicants are eligible for HL based on this workflow rule.

---

**20. SOURCING BUSINESS NAME — SBN**

**SBN = Sourcing Business Name**

The chatbot must recognize:

- SBN
- Sourcing Business Name
- Sourcing Business
- Sourcing Business Name field

as the same concept.

The following terms should be treated as equivalent in the GRO Micro Sales context:

**SBN Micro = GMSS = GRO Micro Sales = Sales Banking Name**

Therefore, if the user says:

“What is SBN?”

the model should understand the context as:

**Sourcing Business Name**

If the user says:

“SBN Micro”

or

“GMSS”

or

“GRO Micro Sales”

or

“Sales Banking Name”

the RAG model should recognize these as referring to the same sourcing business/channel terminology according to the current business mapping.

---

## 21. CONDENSED APPLICATION FORM

The **Condensed Application Form** is part of the **Pre-Login Document** process.

It should be mapped to the following terminology:

- Condensed Application Form
- Condensed Form
- Application Form
- Pre-Login Form
- Form Signing
- Sign Link
- Document Verification Link
- Condensed Link

The process includes:

### **Document Verification + Application Form Signing**

The application form must be signed by the relevant:

- Applicant
- Co-Applicant(s)

The required link may be communicated through the applicant's registered/email communication channel.

The following terms should be treated as potentially referring to this process depending on context:

- Condensed Link
- Document Verification Link
- Sign Link

The chatbot should understand that these links are associated with the **Pre-Login Document / Condensed Application Form / document verification and signing process**.

---

## 22. PRE-LOGIN DOCUMENT PROCESS

Pre-Login Documents are part of the process leading toward **File Login**.

The **Condensed Application Form** is included as part of the Pre-Login Document process.

The process includes:

**Document Verification → Application Form → Applicant/Co-Applicant Signing**

The RAG model should understand that:

**Document verification and application form signing are part of the Pre-Login Document process.**

Do not treat the Condensed Application Form as an unrelated standalone stage.

---

## **23. TECHNICAL TERMINOLOGY / ACRONYM MAPPING**

Create a **global terminology dictionary** across all PDFs.

The RAG model should understand both the full term and acronym.

At minimum include:

### **Application / Sales**

**BDE = Business Development Executive**

**DSA = Direct Selling Agent**

**SBN = Sourcing Business Name**

**GMSS = GRO Micro Sales**

**GRO Micro Sales = GMSS = SBN Micro = Sales Banking Name**

### **Loan Products**

**HL = Home Loan**

**LAP = Loan Against Property**

### **Payment**

**IMD = Initial Money Deposit**

### **Bureau**

**CIBIL = Credit Information Bureau India Limited**

**CMR = CIBIL MSME Rank**

**Consumer Score = Individual bureau score**

**Commercial Score = Entity bureau score**

### **Application Participants**

**Applicant = Main Applicant**

**Co-Applicant = Additional applicant associated with the loan application**

**Financial Applicant = Applicant whose income is considered**

**Financial Co-Applicant = Co-Applicant whose income is considered**

## **Application Stages**

**QDE = Quick Data Entry**

**Bureau Summary = Bureau / Credit Bureau stage**

**IV = Income Verification**

**Income Verification Group = Income Verification**

**Banking Verification = Income Verification / Banking portion**

**SP = Shareholding Pattern**

**RD = Reference Details**

**CD = Collateral Details**

**Pre-Login Documents = Pending Documents for Login / Pre-Login document process**

**Documents / Communication**

**Condensed Application Form = Condensed Form**

**Document Verification Link = Verification Link**

**Sign Link = Application Signing Link**

**Condensed Link = Link associated with Condensed Application Form process**

---

## **24. NATURAL USER LANGUAGE MAPPING**

The RAG model should understand informal queries, not just exact field names.

Examples:

### **Income Verification**

“Banking pending”

→ Income Verification / Banking Verification

“Banking kab hoga?”

→ Income Verification stage

“Bank statement ka stage konsa hai?”

→ Income Verification / Banking Verification

“IV pending hai”

→ Income Verification

---

## **Bureau**

“Bureau score”

→ Bureau Summary / Bureau Score

“CIBIL check”

→ Bureau Summary

“Business CIBIL”

→ Commercial Bureau / Entity Bureau

“Personal CIBIL”

→ Consumer Bureau / Individual Bureau

---

## **Reference**

“Reference dena hai?”

→ Reference Details

“2 reference compulsory hai?”

→ Reference Details requirement

“Reference verify kaun karega?”

→ Sales manually validates references

---

## **Shareholding**

“51% holding”

→ Shareholding Pattern

“Shareholder co-applicant hona compulsory hai?”

→ No, shareholder and Co-Applicant are separate concepts.

---

## **IMD**

“IMD link”

→ Initial Money Deposit payment link

“Initial payment”

→ IMD, depending on context

“Deposit kab lagega?”

→ IMD applicability; check Plant & Machinery condition

---

**SBN**

“SBN”

→ Sourcing Business Name

“GMSS”

→ GRO Micro Sales / SBN Micro

“Sales banking name”

→ SBN / Sourcing Business Name

---

**25. IMPORTANT CROSS-STAGE DECISION LOGIC**

The RAG model must not answer stage applicability questions independently.

It should consider relevant conditions.

**Example 1 — Income Verification**

Check:

**Loan Amount > ₹20L?**

AND

**Is Income Considered = Yes?**

If both conditions are satisfied → Income Verification applies.

---

**Example 2 — Entity Co-Applicant Bureau**

Check:

**Applicant = Entity Co-Applicant?**

AND

**Loan Amount < ₹20L?**

If yes → Bureau Score is not calculated for that Entity Co-Applicant.

---

**Example 3 — Entity Main Applicant Bureau**

Check:

**Main Applicant = Entity?**

If yes → Bureau Score is calculated even when Loan Amount < ₹20L.

---

#### **Example 4 — Shareholding Pattern**

Check:

**Main Applicant = Company or Firm?**

If yes → Shareholding Pattern applies.

If:

**Main Applicant = Individual or Trust**

→ Shareholding Pattern does not apply.

---

#### **Example 5 — Reference Details**

No applicant-type restriction.

→ **Two references are compulsory for all applicant types.**

---

#### **Example 6 — IMD**

Check:

**Business = Plant & Machinery based?**

If yes → IMD applies.

---

### **26. DO NOT MIX THESE CONCEPTS**

The RAG model must maintain the following distinctions:

**Financial Applicant ≠ Applicant**

**Financial Co-Applicant ≠ every Co-Applicant**

**Reference ≠ Co-Applicant**

**Reference ≠ Guarantor**

**Shareholder ≠ Co-Applicant**

**Consumer Score ≠ Commercial Score**

**Individual Bureau ≠ Entity Bureau**

**Income Verification ≠ Bureau Summary**

**Income Verification ≠ IMD**

**SBN ≠ Applicant Type**

**SBN = Sourcing Business Name**

**HL = Home Loan**

**IMD = Initial Money Deposit**

**IV = Income Verification**

---

## **27. RAG RESPONSE PRIORITY**

When answering a user query, the model should prioritize:

### **1. Applicant Type**

→ Individual / Company / Firm / Trust

### **2. Main Applicant vs Co-Applicant**

### **3. Loan Amount**

→ Particularly ₹20L threshold

### **4. Is Income Considered?**

→ Yes / No

### **5. Product**

→ HL / LAP / etc.

### **6. Business Type**

→ Plant & Machinery based or not

### **7. Applicable Stage**

→ Bureau / Soft Approval / IMD / Income Verification / Shareholding / Collateral / Reference / Pre-Login

The model should use these conditions before providing a definitive answer.

---

## **28. IMPORTANT — UPDATE ALL EXISTING PDFs CONSISTENTLY**

Apply these rules across **all existing Knowledge Base PDFs**.

If a rule is relevant to multiple PDFs, include it in each relevant PDF rather than relying on the RAG system to retrieve another document.

For example:

- The **Income Verification PDF** must contain the ₹20L + Financial Applicant conditions.
- The **Bureau PDF** must contain the Entity Main Applicant vs Entity Co-Applicant ₹20L distinction.

- The **Shareholding Pattern PDF** must contain Company/Firm applicability and 51% requirement.
- The **Reference Details PDF** must clearly state that it is compulsory for all applicant types and requires two references.
- The **IMD PDF** must clearly state Plant & Machinery applicability.
- The **Pre-Login Documents PDF** must explain the Condensed Application Form, document verification, and signing process.
- The **Loan Details / Application PDF** should contain SBN terminology and its aliases.
- The **Glossary / Terminology section** should consolidate all acronyms and synonyms.

---

## 29. RAG-SPECIFIC REQUIREMENT

Every stage should contain a dedicated section:

### **“Terminology, Acronyms and Common User Queries”**

For every important term, provide:

**Official Term → Acronym → Alternate Terms → User Phrases → Meaning → Related Stage → Conditions**

The chatbot must be able to understand queries such as:

“IV”

“Banking”

“Bureau”

“CIBIL”

“Business CIBIL”

“51% holding”

“SP”

“RD”

“IMD”

“HL”

“SBN”

“GMSS”

“Condensed link”

“Sign link”

“Document verification link”

without requiring the user to use the exact terminology from the UI.

---

### Final instruction to Claude

**Update the existing PDFs rather than creating an unrelated new document. Preserve the existing stage-specific knowledge and add the above business rules, conditional logic, terminology mappings, acronyms, synonyms, and common query interpretations. Ensure the same business rule is expressed consistently across all PDFs wherever relevant. Do not invent missing rules. Do not infer a rule merely from general banking knowledge. The final documents must be optimized for retrieval by a RAG chatbot, meaning each important rule should be self-contained, explicit, unambiguous, and understandable even when retrieved independently from the rest of the Knowledge Base.**

### Secured Loan Product Structure

**UGRO Capital provides Secured Loans only** in the relevant loan journey.

Under the **Secured Loan** product, there are two sub-products:

1. **LAP — Loan Against Property**
2. **HL — Home Loan**

Therefore, the hierarchy should be represented as:

**UGRO Capital → Secured Loan → Sub Product → LAP / HL**

### RAG terminology mapping

- **Secured Loan** → Main Loan Product
- **LAP** → Loan Against Property → Secured Loan sub-product
- **HL** → Home Loan → Secured Loan sub-product
- **Loan Against Property / Property Loan** → LAP
- **Home Loan / Housing Loan** → HL

### Important RAG rule

The chatbot should **not describe Unsecured Loan as an available UGRO Capital product** in this knowledge base.

If a user asks:

“What loan products are available?”

The answer should be:

**UGRO Capital provides Secured Loans. The two sub-products under Secured Loan are Loan Against Property (LAP) and Home Loan (HL).**

If the user asks:

“What is LAP?”

→ **LAP means Loan Against Property and is a sub-product under Secured Loan.**

If the user asks:

“What is HL?”

→ **HL means Home Loan and is a sub-product under Secured Loan.**

Also, in the earlier master instruction, the **Loan Products** section should be changed from the generic wording to:

**Secured Loan → LAP (Loan Against Property) / HL (Home Loan)**

And the RAG model should use **product = Secured Loan** as the parent product when reasoning about downstream stage conditions.

### **Loan Application / LAF — Entry Point for BDE**

The loan application journey for a **BDE (Business Development Executive)** starts from the **Home Page**.

The Home Page provides three primary sections:

#### **1. Home — Create / Search Application**

The **Home** section allows the BDE to:

- Create a new loan application
- Search/access an existing application

This is the primary starting point for the BDE's loan application journey.

#### **2. Search — Search Existing Applications**

The **Search** section allows the BDE to search for an **existing loan application across the entire LOS (Loan Origination System)**.

This is used when the BDE needs to locate an application that has already been created.

#### **3. Business — Loan Application Details**

The **Business** section provides the details/information of the loan application based on the **Loan Application ID**.

It represents the application-level view of the loan journey and its associated information.

---

### **LAF — Loan Application Form**

The **Loan Application** is also referred to as:

**LAF = Loan Application Form**

Therefore, the following terms should be treated as related in the RAG system:

**Loan Application = Loan Application Form (LAF) = Application = LAF**

The specific application is identified using a unique **Loan Application ID / LAF ID**.

---

### **Loan ID / Application ID / LAF ID**

The following terms should be understood as referring to the **unique identifier assigned to a particular Loan Application Form (LAF)**:

- Loan ID
- Loan Application ID
- Application ID
- LAF ID
- LAF
- Application Number

For example:

**LI00010720260814142517**

is an example of a unique identifier associated with a particular LAF/application.

Therefore, when a user asks:

“What is the LAF ID?”

“What is the application ID?”

“Where can I find the loan ID?”

“Search this LAF.”

“Open this application.”

the RAG model should understand that the user is referring to the **unique identifier of the Loan Application Form (LAF)**.

---

### **Important RAG Terminology Mapping**

The model should understand:

**LAF → Loan Application Form**

**Loan Application → LAF**

**Application ID → Unique ID of the LAF**

**Loan ID → Unique ID of the LAF**

**LAF ID → Unique ID of the LAF**

**Application Number → Unique identifier of the application/LAF**

**LOS → Loan Origination System**

**BDE → Business Development Executive**

---

### **Important distinction**

Do **not** confuse:

**LAF / Loan Application**

with

**Loan Application ID / LAF ID**

The distinction is:

**LAF = the Loan Application Form/application itself**

**LAF ID / Application ID / Loan ID = the unique identifier assigned to that LAF**

For example:

**LAF:** The actual loan application

**LAF ID:** LI00010720260814142517

---

### **RAG General Entry Flow**

The overall BDE journey should therefore start **before the individual loan-processing stages** we discussed earlier:

**BDE Login → Home Page**

From Home Page:

**Home → Create/Search Application**

**Search → Search Existing Application across LOS**

**Business → View Loan Application details using Application ID**

Then the selected/created **LAF (Loan Application Form)** proceeds through the applicable loan-processing stages:

**LAF / Loan Application → Loan Details → QDE → Bureau → Soft Approval → IMD (conditional) → Income Verification (conditional) → applicable downstream stages → Pre-Login Submission → Pre-Login Review → BDE Task**

### **Critical RAG rule**

Whenever the user uses **Loan ID, Application ID, LAF, LAF ID, or Application Number**, the chatbot should first understand that the query is referring to the **specific Loan Application Form (LAF) and its unique identifier**, rather than treating those terms as separate concepts.

This should be included in the **global terminology section and directly inside relevant stage descriptions**, not just in a glossary.

## **GRO Micro Sales — Overall Sales / Loan Application Journey**

### **General Journey Overview**

The **Sales Journey** is the overall journey through which a loan application is sourced, processed, reviewed, and submitted.

In the context of the GRO Micro Sales loan application process, the following terminology should be treated as closely related:

**Sales Journey → Loan Application Journey → Pre-Login Submission → Pre-Login Review → BDE Task**

The stages described in the Knowledge Base are activities performed as part of this overall journey.

### **High-Level Flow**

#### **Sales Journey**

↓

#### **Loan Application**

↓

#### **Application Creation / Search**

↓

#### **Loan Details**

↓

#### **Quick Data Entry (QDE)**

↓

#### **Bureau Summary / Bureau Score**

↓

#### **Soft Approval**

↓

### **Initial Money Deposit (IMD)**

*Applicable based on the defined IMD condition*

↓

### **Income Verification (IV) / Banking Verification**

*Applicable based on the defined Income Verification conditions*

↓

### **Shareholding Pattern**

*Applicable conditionally for Company / Firm Main Applicants*

↓

### **Collateral Details**

*Applicable where required*

↓

### **Reference Details**

*Compulsory for all applicant types*

↓

### **Pre-Login Documents / Pending Documents for Login**

↓

### **Condensed Application Form**

↓

### **Document Verification**

↓

### **Application Form Signing**

↓

### **Pre-Login Submission**

↓

### **Pre-Login Review**

↓

### **BDE Task**

---

## **Stage-Level Overview**

## 1. Application Creation / Search

The loan application journey begins with creating or searching for the relevant application using the available applicant/application identification details.

---

## 2. Loan Details

The loan-related information is captured, including the applicable **Secured Loan** product and its relevant sub-product:

- **Loan Against Property (LAP)**
- **Home Loan (HL)**

Other sourcing and loan requirement information is captured at this stage.

---

## 3. Quick Data Entry (QDE)

Quick Data Entry captures the applicant and Co-Applclicant information required for the application.

An important condition established in this stage is:

**“Is income considered?” → Yes / No**

This selection determines whether the respective Applicant or Co-Applclicant is treated as **Financial** for the applicable downstream process.

---

## 4. Bureau Summary / Bureau Score

The Bureau Summary stage handles applicable bureau information for the applicants.

The applicable bureau type depends on applicant type:

**Individual → Consumer Score**

**Entity → Commercial Score**

Specific bureau applicability conditions, including the **₹20L loan amount condition for Entity Co-Applclicants**, must be applied as defined in the detailed Bureau Knowledge Base.

---

## 5. Soft Approval

**Soft Approval is compulsory for all cases.**

This stage represents the applicable soft-approval process before the subsequent stages of the loan journey.

---

## 6. Initial Money Deposit (IMD)

**Initial Money Deposit (IMD)** is a conditional stage.

IMD is applicable when the business is **Plant & Machinery based**.

The detailed IMD process, payment mechanism, and applicable conditions are covered in the dedicated IMD Knowledge Base.

---

## 7. Income Verification (IV) / Banking Verification

**Income Verification (IV)** is performed for applicable **Financial Applicants / Financial Co-Applicants**.

The financial status is determined through:

**Quick Data Entry (QDE) → “Is income considered?” → Yes**

Income Verification is applicable when the defined **loan amount and financial-applicant conditions** are satisfied.

The Banking Verification portion provides methods such as:

- Account Aggregator
- Net Banking
- E-Statement
- Scanned Statement

For RAG terminology:

**Banking / Banking Verification → Income Verification (IV)** in the loan application context.

---

## 8. Shareholding Pattern

**Shareholding Pattern** is a conditional stage.

It applies when the **Main Applicant is a Company or Firm**.

It does not apply to:

- Individual
- Trust

The process captures shareholder information and focuses on the required **51% shareholding**.

A shareholder does **not** have to be a Co-Applicant.

---

## 9. Collateral Details

**Collateral Details** is applicable where collateral is required for the relevant application/product.

There is no specific fixed collateral pledging frequency defined in the provided business rule.

The business understanding is that **more collateral is better**, and the RAG model should not invent a fixed maximum number of collateral items.

---

## 10. Reference Details

**Reference Details is compulsory for all applicant types.**

Two references are compulsory.

A reference may be a:

- Neighbour
- Friend
- Colleague
- Relative

Reference information includes:

**First Name + Middle Name + Surname + Address + Pincode + Relation + Contact**

References are validated **manually from the Sales end**.

---

## 11. Pre-Login Documents / Pending Documents for Login

The application then moves toward the **Pre-Login Document** process.

This includes document-related activities required before the application proceeds toward login/submission.

---

## 12. Condensed Application Form

The **Condensed Application Form** is part of the **Pre-Login Document** process.

The process includes:

**Document Verification + Application Form Signing**

The relevant verification/signing link may be referred to using terms such as:

- Condensed Link
- Document Verification Link
- Sign Link

The relevant Applicants and Co-Applicants complete the applicable signing process.

---

### 13. Pre-Login Submission

After the applicable preceding stages and document activities are completed, the application moves toward **Pre-Login Submission**.

This represents the submission portion of the pre-login process.

---

### 14. Pre-Login Review

After Pre-Login Submission, the application enters **Pre-Login Review**.

This represents the review activity associated with the submitted pre-login application and its completed information/documents.

---

### 15. BDE Task

The process subsequently involves the relevant **BDE (Business Development Executive) task**.

The BDE is responsible for carrying out the applicable Sales-side activities associated with the loan application journey.

---

### RAG General Overview Rule

When a user asks a **general journey question**, the RAG model should provide the overall flow first rather than immediately explaining an individual stage.

For example:

**User:**

“What is the sales journey?”

**RAG should understand:**

**Sales Journey → Loan Application → Application Processing Stages → Pre-Login Submission → Pre-Login Review → BDE Task**

and then explain that the detailed stages within the application processing journey include:

**Application Creation/Search → Loan Details → QDE → Bureau Summary → Soft Approval → IMD (conditional) → Income Verification (conditional) → Shareholding Pattern (conditional) → Collateral Details (conditional) → Reference Details (mandatory) → Pre-Login Documents → Condensed Application Form / Document Verification / Signing → Pre-Login Submission → Pre-Login Review → BDE Task**

Correct. This should be added as a **global product hierarchy/business rule** in the RAG KB.

### **Secured Loan Product Structure**

**UGRO Capital provides Secured Loans only** in the relevant loan journey.

Under the **Secured Loan** product, there are two sub-products:

1. **LAP — Loan Against Property**
2. **HL — Home Loan**

Therefore, the hierarchy should be represented as:

**UGRO Capital → Secured Loan → Sub Product → LAP / HL**

### **RAG terminology mapping**

- **Secured Loan** → Main Loan Product
- **LAP** → Loan Against Property → Secured Loan sub-product
- **HL** → Home Loan → Secured Loan sub-product
- **Loan Against Property / Property Loan** → LAP
- **Home Loan / Housing Loan** → HL

### **Important RAG rule**

The chatbot should **not describe Unsecured Loan as an available UGRO Capital product** in this knowledge base.

If a user asks:

“What loan products are available?”

The answer should be:

**UGRO Capital provides Secured Loans. The two sub-products under Secured Loan are Loan Against Property (LAP) and Home Loan (HL).**

If the user asks:

“What is LAP?”

→ **LAP means Loan Against Property and is a sub-product under Secured Loan.**

If the user asks:

“What is HL?”

→ **HL means Home Loan and is a sub-product under Secured Loan.**

Also, in the earlier master instruction, the **Loan Products** section should be changed from the generic wording to:

**Secured Loan → LAP (Loan Against Property) / HL (Home Loan)**

And the RAG model should use **product = Secured Loan** as the parent product when reasoning about downstream stage conditions.
