

Stage 5 — Initial Money Deposit (IMD)

Purpose

The Initial Money Deposit (IMD) stage is the payment stage after the applicable Soft Approval stage in the UGRO loan application journey. At this stage, the applicant is required to pay the applicable initial or login fee before the application can proceed to subsequent applicable stages.

The applicable Initial Money Deposit (IMD) amount is calculated internally by the system. The Business Development Executive (BDE), Sales Agent, or Sales Owner handling the application facilitates the payment. The amount displayed is specific to the particular application and should not be treated as a universal fixed amount.

1. Initial Money Deposit (IMD) / Login Fee Details

The Initial Money Deposit (IMD) screen displays the fee to be collected, including the fee type, base or principal amount, applicable tax components, and final total payable amount.

In the provided example, the screen shows Login Fees with a Principal Fee of ₹2,500, CGST of ₹225, SGST of ₹225, and a Total of ₹2,950. This is an observed test example only. The actual amount can differ between applications because it is calculated internally by the system.

For RAG responses, if a user asks how much Initial Money Deposit (IMD) must be paid, explain that the amount is system-calculated and application-specific. Do not assume a fixed amount unless the actual application amount is available.

2. Payment Link

The payment process is initiated through a payment link. The Business Development Executive (BDE), Sales Agent, or Sales Owner handling the application receives the payment link through the applicable registered or UGRO email channel.

The Business Development Executive (BDE) or sales user opens the payment link and continues with payment through the configured payment gateway. Receiving or generating the link does not mean that the Initial Money Deposit (IMD) payment has been completed.

3. Payment Methods

The payment gateway shown in the provided workflow allows the user to select an available payment method. The observed options include Debit Card, UPI, Net Banking, and Wallets.

Debit Card allows payment using an eligible supported debit card. UPI allows payment using supported UPI methods or applications. Net Banking allows payment through supported banking facilities. Wallets allow payment through supported digital wallet options.

The exact methods available can depend on the payment gateway configuration and the options displayed at the time of the transaction.

4. Payment Gateway

The provided screenshots show Easebuzz as the payment gateway used for the observed transaction. The gateway handles the payment transaction and returns the payment result to the application.

The payment process therefore involves the SkaleUp application providing the payment facility, the Business Development Executive (BDE) or sales user accessing the payment link, the configured payment gateway processing the transaction, and the application receiving the resulting payment status.

5. Payment Authentication and OTP

After the payment process is initiated, an authentication step may be required as part of the payment transaction. Based on the provided process information, OTP is used as an authentication mechanism during the payment process.

OTP is a payment authentication mechanism and should not be interpreted as the loan approval itself. Successful OTP or payment authentication does not independently indicate final loan approval.

6. Successful Payment and Transaction Confirmation

After successful payment, the system records the transaction and displays payment confirmation or a payment summary. The observed payment summary contains information such as Application ID, Fee Type, SkaleUp Transaction ID, Payment Gateway Easebuzz ID, Payment Date and Time, Net Amount Debited, Payment Mode, Product Information, Email ID, and Payment Source.

The Initial Money Deposit (IMD) Summary screen can also display Fee Amount, Transaction ID, UTR Reference Number, Mode of Payment, Transaction Date and Time, and payment Status. In the provided successful example, the status is displayed as COMPLETED.

These details establish that the applicable fee transaction has been successfully processed and recorded for the application.

7. Proceeding After Initial Money Deposit (IMD)

Once payment has been successfully completed and the system records the payment as completed, the Business Development Executive (BDE) can select Proceed and continue to the next applicable stage.

The application should not be treated as having completed Initial Money Deposit (IMD) merely because a payment link was generated, sent, or opened. Successful payment confirmation is the relevant condition for completion of this payment stage.

8. Important System Behaviour

The Initial Money Deposit (IMD) amount is system-calculated and may vary between applications. The chatbot should not assume that every applicant pays the same amount.

The payment is facilitated through the Business Development Executive (BDE), Sales Agent, or Sales Owner handling the application. The payment link is provided through the applicable

registered or UGRO email channel.

The payment gateway handles the transaction while SkaleUp records or receives the resulting payment status. A payment problem can therefore potentially involve the application, payment gateway, authentication process, network or service availability, or transaction state.

9. RAG Response Rules

- If the user asks what IMD means, explain that Initial Money Deposit (IMD) is the initial/login fee payment stage after the applicable Soft Approval stage.
- If the user asks how much IMD must be paid, state that the amount is calculated internally by the system and is specific to the application. Do not assume a fixed amount.
- If the user asks who facilitates payment, state that the Business Development Executive (BDE), Sales Agent, or Sales Owner handling the application facilitates it using the payment link.
- If the user asks how payment is made, mention the payment link and the payment methods displayed by the configured gateway, including Debit Card, UPI, Net Banking, and Wallets where available.
- If the user asks whether receiving the payment link means payment is complete, state that it does not. Payment must be successfully processed and recorded.
- If the user asks whether OTP means the loan is approved, clarify that OTP is an authentication step associated with payment and is not itself final loan approval.
- If the user asks whether the application can proceed after IMD, state that it can proceed after successful payment confirmation and completion status.
- If the payment status is COMPLETED, the IMD payment has been successfully recorded for that transaction.
- If payment is failed, pending, or showing an error, do not describe IMD as completed. Treat it as a payment-processing or system-status issue.

10. RAG-Optimized Description

The Initial Money Deposit (IMD) stage is the payment stage after the applicable Soft Approval stage in the UGRO loan application journey. The applicant is required to pay an applicable initial or login fee before the application can proceed to the next applicable stage. The IMD amount is calculated internally by the system and is application-specific. The Business Development Executive (BDE), Sales Agent, or Sales Owner handling the application facilitates the payment.

The Initial Money Deposit (IMD) screen displays the applicable fee, base amount, tax components, and total payable amount. The Business Development Executive (BDE) or sales user receives the payment link through the applicable registered or UGRO email channel and opens the payment gateway. The observed payment gateway is Easebuzz. The payment methods shown in the workflow include Debit Card, UPI, Net Banking, and Wallets. Payment authentication may involve OTP.

After successful payment, the system records transaction details including application ID, fee type, transaction identifiers, payment reference information, payment date and time, amount, payment mode, and payment status. The provided successful example shows the payment

status as COMPLETED.

Generating or receiving a payment link does not mean that Initial Money Deposit (IMD) is completed. IMD should be treated as completed only after successful payment processing and confirmation of the appropriate completed status. After successful confirmation, the Business Development Executive (BDE) can proceed to the subsequent applicable loan-processing stage.
